Learning in the Fast Lane Chester E. Finn, Jr., Andrew E. Scanlan, 2021-05-11 More than three million high school students take five million Advanced Placement exams each May yet remarkably little is known about how this sixty year old privately run program has become one of U S education s greatest successes From its mid century origin as a tiny option for privileged kids from posh schools AP has also emerged as a booster rocket into college for hundreds of thousands of disadvantaged youngsters It challenges smart kids affects school ratings affords rewarding classroom challenges to great teachers tunes up entire schools and draws vast support from philanthropists education reformers and policymakers AP stands as America s foremost source of college level academics for high school pupils Praised for its rigor and integrity more than 22 000 schools now offer some or many of its thirty eight subjects from Latin to calculus art to computer science But challenges abound today as AP faces stiffening competition especially dual credit curriculum wars charges of elitism misgivings by elite schools and universities and the arduous work of

infusing rigor into schools that lack it and academic success into young people unaccustomed to it In today's polarized climate can Advanced Placement maintain its lofty standards and overcome the hostility politics and despair that have sunk so many other bold education ventures Advanced Placement The Unsung Success Story of American Education is a unique account richly documented and thoroughly readable of the AP program in all its strengths and travails written by two of America's most respected education analysts The Schenley Experiment Jake Oresick, 2017-04-14 The Schenley Experiment is the story of Pittsburgh's first public high school a social incubator in a largely segregated city that was highly even improbably successful throughout its 156 year existence Established in 1855 as Central High School and reorganized in 1916 Schenley High School was a model of innovative public education and an ongoing experiment in diversity Its graduates include Andy Warhol actor Bill Nunn and jazz virtuoso Earl Hines and its prestigious academic program and pensions lured such teachers as future Pulitzer Prize winner Willa Cather The subject of investment as well as destructive neglect the school reflects the history of the city of Pittsburgh and provides a study in both the best and worst of urban public education practices there and across the Rust Belt Integrated decades before Brown v Board of Education Schenley succumbed to default segregation during the white flight of the 1970s it rose again to prominence in the late 1980s when parents camped out in six day long lines to enroll their children in visionary superintendent Richard C Wallace's reinvigorated school Although the historic triangular building was a cornerstone of its North Oakland neighborhood and a showpiece for the city of Pittsburgh officials closed the school in 2008 citing over 50 million in necessary renovations a controversial event that captured national attention Schenley alumnus Jake Oresick tells this story through interviews historical documents and hundreds of first person accounts drawn from a community indelibly tied to the school A memorable important work of local and educational history his book is a case study of desegregation magnet education and the changing nature and legacies of America's oldest public schools **Curves and Surfaces** Jean-Daniel Boissonnat, Albert Cohen, Olivier Gibaru, Christian Gout, Tom Lyche, Marie-Laurence Mazure, Larry L. Schumaker, 2015-08-13 This volume constitutes the thoroughly refereed post conference proceedings of the 8th International Conference on Curves and Surfaces held in Paris France in June 2014 The conference had the overall theme Representation and Approximation of Curves and Surfaces and Applications The 32 revised full papers presented were carefully reviewed and selected from 39 submissions The scope of the conference was on following topics approximation theory computer aided geometric design computer graphics and visualization computational geometry and topology geometry processing image and signal processing interpolation and smoothing mesh generation finite elements and splines scattered data processing and learning theory sparse and high dimensional approximation subdivision wavelets and multi resolution method Equivalence Amanda L. Golbeck, 2017-04-28 Equivalence Elizabeth L Scott at Berkeley is the compelling story of one pioneering statistician's relentless twenty year effort to promote the status of women in academe and science Part biography and part microhistory the book provides the context and background to understand

Scott's masterfulness at using statistics to help solve societal problems. In addition to being one of the first researchers to work at the interface of astronomy and statistics and an early practitioner of statistics using high speed computers, Scott worked on an impressively broad range of questions in science from whether cloud seeding actually works to whether ozone depletion causes skin cancer. Later in her career, Scott became swept up in the academic women's movement. She used her well-developed scientific research skills together with the advocacy skills she had honed in such activities as raising funds for Martin Luther King Jr and keeping Free Speech Movement students out of jail toward policy making that would improve the condition of the academic workforce for women. The book invites the reader into Scott's universe, a window of inspiration made possible by the fact that she saved and dated every piece of paper that came across her desk. Failure Up Close Jay P. Greene, Michael Q. McShane, 2018-01-17

For many reasons, failure in education reform is rarely admitted. Even though it is incredibly hard work to try and improve the enormous and diverse American education system because there are political consequences of admitting that a particular effort did not live up to its promises and pressure from philanthropic funders to show success, unsuccessful efforts are often swept under the rug or papered over with public relations efforts that avoid wrestling with the tough realities of educational improvement. This doesn't help anyone. As any educator will tell you, failure is an essential part of learning. Insofar as education reform needs to be a learning movement itself, it has to be able to admit where it has failed and learn from it. Failure Up Close engages a select group of scholars from across the ideological spectrum to examine particular education reform efforts of recent years that have not succeeded and offer lessons for school and system improvement that can be learned from them. Rather than view failure as negative, this volume looks at failure as an opportunity to learn and grow. In fact, the editors endeavored to find authors that would analyze reforms for which they had some fundamental sympathy. The goal is not to bash particular efforts or castigate their supporters but rather to help those supporters understand how to do what they do better and ultimately do better for children. **Proof of the 1-Factorization and Hamilton Decomposition Conjectures** Béla Csaba, Daniela Kühn, Allan Lo, Deryk Osthus, Andrew Treglown, 2016-10-05

In this paper, the authors prove the following results via a unified approach for all sufficiently large n :

- i) Factorization conjecture: Suppose that n is even and $D \geq \frac{n}{4} + 1$. Then every D -regular graph G on n vertices has a decomposition into perfect matchings.
- ii) Hamilton decomposition conjecture: Suppose that $D \geq \frac{n}{2}$. Then every D -regular graph G on n vertices has a decomposition into Hamilton cycles and at most one perfect matching.
- iii) Optimal packings of Hamilton cycles: Suppose that G is a graph on n vertices with minimum degree $\geq \frac{n}{2}$. Then G contains at least $\frac{2}{n-2} \delta(G)$ edge-disjoint Hamilton cycles. Here $\delta(G)$ denotes the degree of the largest even regular spanning subgraph one can guarantee in a graph on n vertices with minimum degree $\geq \frac{n}{2}$.

These results were first explicitly stated by Chetwynd and Hilton. ii) and the special case $\frac{n}{2}$ of iii) answer questions of Nash-Williams from 1970. All of the above bounds are best possible.
