Hec-Hms Máximo Villón Béjar, 2015-01-01 El Hec Hms Hydrologic Engineering Center's Hydrologic Modeling System es un programa de simulación hidrológica para estimar los hidrogramas de salida caudales máximos y tiempos al pico en una cuenca o varias subcuencas a partir de condiciones extremas de lluvia. Para realizar estos cálculos se parte de los datos de un hietograma de precipitación y a través de una serie de modelos se calcula el exceso de precipitación o precipitación neta restando las pérdidas por infiltración y detención sobre la base de una función de velocidad de infiltración del agua en los suelos. Los excesos de precipitación resultantes son seguidos mediante hidrogramas unitarios o técnicas de la onda cinemática a la salida de la subcuenca generando un hidrograma. La aplicación tiene una interfaz gráfica que permite al usuario introducir la información necesaria para efectuar una simulación, manejar los componentes de análisis hidrológicos a través de módulos integrados y obtener respuestas gráficas o tabuladas de fácil comprensión e impresión.

Implantable Cardiac Devices Technology David Korpas, 2014-05-13 Development in a majority of medicine branches today is based on technological advancement. This is the case in cardiology where medical devices designed to correct heart rhythm: pacemakers, cardioverters, defibrillators, and biventricular systems are implanted in order to help a sick heart. Medical pacing devices today are only developed and produced globally by a several producers who make different technical solutions: algorithms, system parameters, etc. The book *Implantable Cardiac Devices Technology* is targeted at biomedical clinical engineers, technicians in practice, students of biomedical disciplines, and all medical staff who are required to understand the basics of pacing technology. The book is comprised of fourteen chapters that are further subdivided according to specific topics. Chapters dealing with basic heart anatomy, physiology, and arrhythmology are included for the sake of comprehensiveness. Chapters avoid the description of special functions but cover general procedures and parameters common for the systems of all producers. The book is intended to serve as a monothematic textbook. In order to make the text comprehensible and well arranged for a reader, references to professional literature are only provided once in a respective chapter.
