Bureau of Reclamation, **Skill and Occupational Change** Roger Penn, Michael Rose, Jill Rubery, 1994 In this major new book leading sociologists economists and social psychologists present their highly original research into changes in jobs in Britain in the 1980s Combining large scale sample surveys personal life histories and case studies of towns employers and worker groups their findings give clear and often surprising answers to questions debated by social and economic observers in all advanced countries Does technology destroy skills or rebuild them How does skill affect the attitudes of employees and their managers towards their jobs Are women gaining greater skill equality with men or are they still stuck on the lower rungs of the skill and occupational ladders The book also takes up neglected issues what do employees really mean by a skilled job How does skill change link with changes in social values and challenges and discredits the widely held view that new technology has de skilled the work force Skill and Occupational Change exploits the richest single data set available in contemporary Europe and the authors exemplify many new techniques for researching skills at work as an economic resource as a motor of occupational change and as a basis for personal careers and identity It provides the most comprehensive authoritative and carefully researched set of conclusions to date on skill trends and their implications and draws the authoritative new map of skill change in British society Recent Social Trends in Russia

1960-1995 Irene A. Boutenko, 1997-07-22 The newest volume in the Comparative Charting of Social Change Series which documents patterns of social change in modernized societies Recent Social Trends in Russia is a collection of statistical and sociological data on trends in Russian society that have never before been assembled in a comprehensive and systematic manner It presents an extensive analysis of the major social transformations that took place in Russia both before and after the fall of the Communist system and dispels many illusions about Russian society in the twentieth century Recent Social Trends in Russia reveals remarkable similarities between emerging trends in Russia and in Western countries during the last thirty five years Russian society shows a strong tendency toward modernization although the speed of change is sometimes slower than in Western industrialized countries Similar to Western societies Russia s population is aging unemployment prevails among the young and a new class of young professionals is emerging The institution of marriage is losing its significance emotional disorders and consumption of mood altering substances are increasing and religious beliefs and habits are becoming more diversified Political upheavals over the last ten or twelve years and the collapse of Communism have not had much effect on the social landscape in Russia There has however been an increase in the influence of Western culture and a violent backlash in fields that underwent forceful modernization The findings suggest that Russian and Western societies are more similar than one would imagine and contradict the popular conception that Communist Russia fell out of world history for seventy years
