

Mirror, mirror - Teacher Guide

Introduction

In this activity, test the Law of Reflection based on experimental evidence. However, the back-silvered glass mirrors present a twist. As light travels from air into glass, it changes direction (refracts), reflects off the shiny metal back coating, then changes direction again upon emerging from the glass. The reflected ray may not match up with students' expectations, and offers them a challenge to work out what happened as the light traveled into and out of the mirror. Mirrors are everywhere: in our cars, bathrooms, shiny metal surfaces, water, and windows. Large astronomical telescopes use curved mirrors (a rigid glass or polymer coated with a metal) to focus starlight on to electronic detectors.

Objective

Students produce raw data and explanations based on their data. Their raw data are their pencil tracings of incident and reflection rays.

Physics

§112.39.(c)- 1A: demonstrate safe practices during laboratory and field investigations.

§112.39.(c)- 2E: design and implement investigative procedures, including making observations, asking well-defined questions, formulating testable hypotheses, identifying variables, selecting appropriate equipment and technology, and evaluating numerical answers for reasonableness.
