Name _____

Section A: Endocrine vs. Nervous Systems

The endocrine and nervous systems function to regulate body activities. Since both systems are involved in regulation, how does the endocrine system differ in regulation compared to the nervous system? The nervous system uses electrical impulses and neurotransmitters to control processes. These impulses are localized and are extremely fast. The endocrine system is comprised of glands that use chemical messengers to influence a wide range of activities such as growth, development and metabolic activities. These chemical messengers called hormones regulate processes at a slower rate. The hormonal effects last longer and are more widespread within the body.

1. How are the nervous system and the endocrine system different?

3. Endocrine glands secrete hormones directly into the bloodstream while exocrine glands release secretions through ducts into cavities or body surfaces. Some endocrine glands have other functions beyond hormone production and secretion. These organs are called mixed glands. For example: In addition to hormone production, the pancreas secretes digestive enzymes into the small intestines. Consider the other endocrine glands and list glands that would be considered mixed based on the above criteria. _____

Physiology Coloring Workbook Kenneth Axen, Kathleen Vermitsky Axen, 1997 Physiology Coloring Workbook is a breakthrough approach to learning and remembering the body's processes. Written and illustrated by experts who are both research scientists and teachers, it features 250 striking original illustrations that will give students a clear and enduring understanding of physiology. Learning interactively through coloring thoroughly fixes physiological concepts in the mind and takes less time than memorizing from textbooks. Physiological processes are fully explained and complex subjects are approached through the gradual introduction of simple drawings. The authors employ a logical and consistent use of color to convey information; for example, arterial blood is always red, whereas venous blood is blue and capillary blood is violet. Each lesson includes clearly displayed labels and specific coloring instructions. This book is an invaluable and lasting resource for students in disciplines including anatomy and physiology, biology, nursing, physical therapy, and rehabilitation, medical technology, nutrition, physical education, allied health, and health sciences. The 250 plates in the book are organized in the following sections: Homeostasis, The Cell, Transport Mechanisms, Nervous System, Muscle, Cardiovascular System, Renal System, Respiratory System, Gastrointestinal System, Metabolism, Endocrine System, Reproduction. **Human Anatomy & Physiology Coloring Workbook** Anderson, 2008-04-25 This valuable student resource is intended for use in the undergraduate human anatomy and physiology class.
