

Historical Thesis Statement

A thesis statement is central to any historical research paper. The thesis statement is the historical argument of its author. A well-crafted thesis statement alerts a reader to the purpose of the project. After reading a thesis statement, the reader develops a clear idea of the subject that the researcher will discuss in the paragraphs that follow.

Likewise, a strong thesis statement acts as a map as you develop your project. Guided by the assertion found within a thesis, you will craft paragraphs full of evidence from primary and secondary sources in order to support your claim. A thesis also focuses the research project. If you find yourself writing a paragraph that relates to your chosen topic but you realize that the paragraph does not work to prove your thesis statement, it is generally a safe bet that the paragraph can be removed from the paper. A strong thesis statement will keep you from wandering away from the purpose of your project.

Historical Lenses

As you have discovered in this course so far, historians not only ponder “what” happened regarding historical events, but also “why” those events happened. “Why” is difficult to prove, however, and historians often differ on the connections between events. Historians approach topics from different perspectives. These different perspectives can be said to be the result of looking at a topic through different lenses. Just like colored lenses or prescription lenses can change the way a person views the world, historical lenses can change the way a historian views a topic.

Often, the choice of a primary lens will simply reflect the historian’s personal interests or priorities. For example, A historian who is interested in military strategy may not be interested in technological innovations except for those with battlefield applications. A historian who is interested in environmental history may not be interested in business practices except for when those practices affect the natural landscape.

As these examples show, however, one can rarely use a lens in isolation. Most research projects will employ multiple lenses in order to tell more complete stories. It is useful to study the different types of lenses to be able to recognize the different perspectives and priorities that historians bring to a topic.
