Endothelium; Its Development, Morphology, Function, and Pathology Rudolf Altschul, 1954      **Endothelium; Its Development, Morphology, Function, and Pathology** Rudolf Altschul, 1954      **Structure and Function of Endothelial Cells** K. Messmer, F. Hammersen, 1983-06-14      **Comparative Pathology of the Heart** F. Homburger, I. Lucas, 1974-09-25

**Basic Concepts Of Hemostasis** Genesio Murano, Rodger L. Bick, 2019-06-04 First published in 1980 Murano and Bick provide well rounded accounts into the effects of Hemostasis and Thrombosis as well as a guide to the general physiology associated disorders and therapeutic techniques used to address them This book is ideal for students and practitioners of Hematology as well as those with a general interest in medicine      **Structure and Function of the Circulation** Colin J. Schwartz, Nicholas T. Werthessen, Stewart Wolf, 2012-12-06 This is the third volume of the comprehensive series on Structure and Function of the Circulation edited by Dr Colin J Schwartz with the collaboration of Nicholas T Werthessen and Stewart Wolf Dr Schwartz an authority on vascular structure and function and a respected investigator in this field for many years selected as authors for the chapters an outstanding group of scientists from various parts of the world As indicated in the Preface the impetus for this broad treatise evolved from the scientific sessions of three interdisciplinary international conferences held in Lindau in 1970 in Heidelberg in 1973 and Totts Gap Pennsylvania in 1976 as well as from numerous informal discussions The subjects dealt with in these three volumes range from the roots of our knowledge in ancient history to the most recent information on contractile proteins of smooth muscle cells The structure distribution and dynamics of arteries veins and lymphatics are described in chapters on the systemic circulation as well as that of the heart the vessels themselves the brain nerves and viscera Descriptions of ultrastructure histochemistry metabolism and function of endothelium and of vascular smooth muscle and of vascular changes in aging are all included in the vast scope of this undertaking      Arterial Disorders Adel Berbari, Giuseppe Mancina, 2015-03-19 As our knowledge about arterial disease is greatly expanding the aim of this book is to explore all aspects of arterial pathology including classification clinical manifestations pathogenesis and therapeutic options The discussion of pathophysiologic mechanisms of arterial disease is wide ranging encompassing hemodynamic metabolic humoral inflammatory genetic and environmental factors Particular emphasis is placed on recent concepts such as the role of age associated arterial alterations in the initiation and progression of cardiovascular diseases in older persons the importance of mineral metabolism bone vascular interactions the clinical and prognostic significance of the renal resistive index retinal circulation toxemia of pregnancy as an arterial disease and the role of pulmonary vascular interaction in pulmonary hypertension and cross talk of macrocirculation and microcirculation in target organ involvement Evaluation procedures are carefully explained and the full range of currently available therapeutic options including lifestyle modifications and pharmacologic approaches are described and appraised      **Atherosclerosis: Diet and Drugs** Arnold Eckardstein, 2005-11-02 Cardiovascular diseases continue to be the leading cause of death in the

majority of industrialized countries The most frequent underlying pathology namely atherosclerosis and its clinical sequelae namely coronary heart disease cerebrovascular disease and peripheral artery disease remain common although for a long time we have been made aware of avoidable or modifiable etiological factors such as smoking fat rich diet or lack of exercise and although these adverse lifestyle factors have been extensively addressed by population wide primary prevention programs Cardiovascular morbidity and mortality also remain high despite successful anti hypertensive and lipid lowering drug therapies which help to reduce cardiovascular morbidity and mortality by about 30% in both secondary and tertiary prevention settings This can partly be explained by the increasing life expectancy and growing proportion of elderly people especially in Europe and North America In addition the World Health Organization makes the alarming prediction that probably in response to the spreading of western dietary behavior and lack of exercise resulting in an increasing prevalence of diabetes dyslipidemia and hypertension cardiovascular diseases rather than infectious diseases will become the most frequent cause of death worldwide This volume of the Handbook of Experimental Pharmacology entitled Atherosclerosis is divided into four parts and intends to give an overview on the pathogenesis of atherosclerosis established treatment and prevention regimen and of perspectives for the development of new treatment modalities *Microcirculation* Richard

Effros, 2012-12-02 *Microcirculation* Current Physiologic Medical and Surgical Concepts is based primarily on a course and a series of lectures presented at a congress on microcirculation held at the University of California in August 1979 The book gives an overview of the concepts regarding the structure and properties of small vessels a topic mostly read only in specialized journals The primary focus of the text is on the function and dysfunction of small blood vessels Three major parts comprise the text Part I discusses the morphology physiology and pharmacology of circulation and Part II presents the dynamics or role of the microcirculation in the study of diabetes Finally Part III discusses also the role of microcirculation in disease states particularly hemoconcentration The book will provide much information to researchers and students in the fields of biology medicine physiology and pharmacology **Endothelial Dysfunctions in Vascular Disease** Raffaele De

Caterina, Peter Libby, 2008-04-15 Bridging the gap between the laboratory and the bedside this timely volume illuminates the connection between endothelial dysfunction and vascular disease This comprehensive survey of atherosclerotic disease begins with biology incorporating the latest breakthroughs in the field then elucidates risk factors and diagnostic tools and markers A major section on endothelium directed prevention and therapy shows you how to apply cutting edge research to clinical care Under the careful editorial guidance of Drs De Caterina and Libby the highly regarded contributors address endothelial activation and the initiation of atherosclerosis mechanisms of plaque progression and complications the role of LDL in the origin and progression of atherosclerosis advanced glycation endproducts and the accelerated atherosclerosis in diabetes oxidative stress and vascular disease soluble adhesion molecules as markers of vascular disease hormone replacement therapy and cardiovascular risk anti oxidants and endothelial protection and more The first book dedicated to

the central role of endothelial dysfunction in vascular disease this concise volume gathers all the latest information on the subject into one convenient and cohesive text Make sure your patients are benefiting from current knowledge by keeping a copy of Endothelial Dysfunctions in Vascular Disease close at hand for frequent consultation Introduction Every book has a history this one not excepted having emerged from intersections in professional lives of the Editors This book bears the fruits of a collaboration between the pupil RDC and the mentor PL During an extended sabbatical of the pupil in Boston in 1994 we probed together the concept that endothelial dysfunction served as a common denominator of vascular disease with the balance between inflammation and its inhibition as a fulcrum of the regulation of the behavior of endothelial cells As practicing cardiologists in our clinical lives we sought to link to endothelial function the mechanisms of action of risk factors and of pharmacologic agents used to treat and prevent vascular disease The pupil therefore authored a few reviews on the mechanism of action of risk factors and included them in a small book published in Italian for which the mentor wrote a preface The book was greeted with favor from the Italian cardiological community and provided the nidus for the present more ambitious endeavor which includes updated reviews on the pathogenesis of vascular disease and on the most novel aspects of vascular biology This enterprise was enabled by the contributions of many of our former or present collaborators and colleagues without whose enthusiasm and engagement this work could never have seen light We largely underestimated the devotion necessary on our own side at the beginning but it ultimately yielded a product that we feel achieves our original goals We are aware that we confront a continuously evolving topic where frequent updates would be desirable if not necessary Yet we believe in the value of books such as the current one that attempt to organize in a snapshot of time the vast amount of literature available in a coherent and comprehensive scheme We are aware of existing gaps of emerging material not paid its due and of the rapid evolution of some of the concepts highlighted within The links between the laboratory and the clinic have never afforded more opportunity for new understanding and advances in diagnosis and treatment than today We hope that our colleagues vascular biologists cardiologists internists and other physicians alike will find this compendium a useful guide to this most exciting time in vascular biology and medicine Raffaele De Caterina and Peter Libby Blood Vessels S. Effert, J.D. Meyer-Erkelenz, 2012-12-06 Role of Herpesviruses in Atherogenesis David P Hajjar, Stephen M Schwartz, 1999-02-22 There is a growing body of evidence suggesting that the herpesvirus has a role in many vascular disorders Each chapter in this book discusses in detail the role that herpesviruses play in the pathophysiological processes related to cholesterol metabolism and intracellular trafficking cell proliferation matrix production and arterial tissue remodelling and thrombosis The contributors highlight a wide range of cellular processes focused on the potential role that herpesviruses may play in the etiology and development of cardiovascular disease from early childhood to adult stages of life

**American Learned Men and Women with Czechoslovak Roots** Mila Rechcigl, 2020-11-18 Apart from a few articles no comprehensive study has been written about the learned men and women in America with Czechoslovak roots That s what

this compendium is all about with the focus on immigration from the period of mass migration and beyond irrespective whether they were born in their European ancestral homes or whether they have descended from them Czech and Slovak immigrants including Bohemian Jews have brought to the New World their talents their ingenuity their technical skills their scientific knowhow and their humanistic and spiritual upbringing reflecting upon the richness of their culture and traditions developed throughout centuries in their ancestral home This accounts for the remarkable success and achievements of these settlers in their new home transcending through their descendants as this monograph demonstrates The monograph has been organized into sections by subject areas i e Scholars Social Scientists Biological Scientists and Physical Scientists Each individual entry is usually accompanied with literature and additional biographical sources for readers who wish to pursue a deeper study The selection of individuals has been strictly based on geographical ground without regards to their native language or ethnic background This was because under the Habsburg rule the official language was German and any nationalistic aspirations were not tolerated Consequently it would be virtually impossible to determine their innate ethnic roots or how the respective individuals felt Doing it in any other way would be a mere guessing and thus less objective

**Atherosclerosis** G. Manning, 2013-03-09 The International Workshop Conference on Atherosclerosis was held at the University of Western Ontario London Ontario Canada September 1-3 1975 This book does not represent in a strict sense the entire proceedings of the above Workshop Conference but does reflect largely the format and the essential content of the scientific sessions Thus each of the three Sections of the book is comprised of the summarized presentations either at the Plenary Sessions Section I Proffered Papers Section II or Workshops Section III Section I comprises all the presentations of the Plenary Session on September 1 and the first three presentations at the Plenary Session on the last day of the Conference September 3 The remaining two addresses of the latter Session Resume of Workshop Conference and Closing Remarks follow the Section III at the end of the book Sections II and III are subdivided into Chapters which correspond to the individual Sessions of Proffered Papers and Workshops respectively To facilitate the orientation particularly for those who attended the Workshop Conference a Summary Table of all Sessions of Proffered Papers designated as Chapters in this book precedes Section II and a similar Summary Table of Workshops also designated as Chapters precedes Section III The Tables include in addition the names of both Chairmen of each Session The Chairmen whose names do not appear on either Summary Table are those who chaired the two Plenary Sessions i e **Atherosclerosis** Sergey Fedoroff, Gary D. Burkholder, Avrum I. Gotlieb, B. Lowell Langille, 2012-12-06 This volume contains the papers which were presented at the First Altschul Symposium Atherosclerosis Cellular and Molecular Interactions in the Artery Wall The symposium was held in Saskatoon at the University of Saskatchewan in May 1990 in memory of Dr Rudolph Altschul a pioneer in the field of vascular biology and the prevention of atherosclerosis Dr Altschul was Professor and Head of the Department of Anatomy at the University of Saskatchewan from 1955 to 1963 The challenge for biomedical scientists is to unravel the multifactorial etiology of

atherosclerosis For the last hundred and sixty years anatomical pathologists have carefully studied the morphological changes of the human vascular wall during the initiation and evolution of the fibrofatty atherosclerotic plaque Based on these elegant morphological observations theories on atherogenesis were put forth by pathologists in the 1840 s Rudolf Virchow suggested that the movement of substances from the blood into the vessel wall was important for atherogenesis while Carl von Rokitansky felt that the deposition of substances on the luminal surface of the artery resulted in the formation of atherosclerotic plaque Since these original theories it has become apparent that the pathogenesis of atherosclerosis is multifactorial and the disease evolves in stages It is also likely that not all plaques arise through the same sequence of events and that many steps are involved in the development of each plaque Today our understanding of the complicated processes of atherogenesis is still incomplete

Blood and Arterial Wall in Atherogenesis and Arterial Thrombosis Joseph Gerardus

Andreas Johannes Hautvast,R. J. J. Hermus,F. van der Haar,1975 Arterial Lesions and Arteriosclerosis H. Jellinek,2012-12-06 This monograph summarizes the results of a fifteen year vascular pathology research project sponsored by the Hungarian Academy of Sciences The workers who have participated in this project are indebted to the Academy for financing extensive investigations and visits to institutes abroad the aims of which were to solve certain problems by international cooperation The results presented by the collective effort of research teams each studying here have been achieved a particular problem but working together to the same end Mutual discussion of findings and a regular exchange of information between the research groups have contributed to the progress of the investigations Regular publication of details and mutual criticism ensured that the findings were uniformly interpreted It is hoped that the fundamental aim of our long term project i e the selection of the right approach to the complex problem of vascular pathology has been achieved The new approach results from the recognition that since arteriosclerosis finally leads to various kinds of vascular injury attention should be focussed on the events preceding the development of the lesions rather than on the lesions themselves This claim has been confirmed by various model experiments in which vascular injury inflicted under different conditions uniformly led to morphologically verified arteriosclerotic change The recent increase in the incidence of civilization diseases of the vascular system has resulted in a world wide expansion of arteriosclerosis research **Atherosclerosis** R.J.

Jones,2012-12-06 This is the second of a number of international symposia which will I hope continue to be held until atherosclerosis is no longer a major problem The first symposium was held three years ago in Athens Greece under the chairmanship of Dr Constantinos Miras who although he could not attend this symposium participated actively in the deliberations of this Program Committee Atherosclerosis together with its sequelae constitute the most important source of morbidity and mortality in civilized countries While a major attack is being made on the consequences the sequelae of this disease not enough attention is being paid to the basic cause atherosclerosis Yet if the basic disease were eradicated the major concern of this symposium the sequelae would constitute only a minor and rare disease group The approach of the

Program Committee was to bring together experts in the multiple disciplines which have a bearing on atherosclerosis There is a great need for an exchange of ideas from various groups studying the basic process in many divergent ways The hope we have is that those present or those later studying the Proceedings may be stimulated to attack the problem in new ways Perhaps a breakthrough will be made or at least a brick or two added to build the structure a rampart needed to defend against atherosclerosis Better still their contributions may help to confine it to a small area Atherogenesis and Aging Sandra R. Bates, Edwin C. Gangloff, 2012-12-06 Age is a nonreversible risk factor for atherosclerosis The atherosclerotic process begins early in life progresses during the middle years and usually culminates in clinical disease towards the later years of the life span Since atherosclerosis is a multifactorial disease and many of the risk factors are time and age related it has been difficult to sort out intrinsic aging from environmental factors that operate over many years Furthermore the role of genetic factors remains unknown This workshop has produced much worthwhile information that is helping elucidate the impact of age on atherogenesis Important strides have been made in understanding the role of changes in the arterial wall and of lipoproteins platelets and monocyte derived macrophages in the disease process In parallel our understanding of the biology of aging has increased sufficiently so that these two areas of interest can now profitably intersect The proceedings of this successful workshop emphasize that there is much to be gained by continued interaction between those scientists interested in the biology of aging at all levels and those interested in the atherosclerotic process Hopefully we may eventually progress in our understanding and reach the stage when atherosclerosis will no longer be an inexorable concomitant of human aging Edwin L Bierman M D Contents Foreword V Contributors IX Participants in the Workshop XV Introduction and Statement of Research Recommendations Sandra R **The American Journal of Pathology** Frank Burr Mallory, 1927
