

## ECON 4214, Economics of Health Care

### Problem Set 1, Comparative Advantage

Show your work.

Suppose there are two people, Abe and Nancy, and two goods, Food,  $F$  and Medical Care,  $M$ . The set of indifference curves of Abe  $U_A(F_A, M_A)$  and Nancy  $U_N(F_N, M_N)$  are given by

$$U_A = F_A^{0.3} M_A^{0.7}$$

$$U_N = F_N^{0.3} M_N^{0.7}.$$

Suppose also that Abe's initial endowment is  $\{F_A^e, M_A^e\} = \{100, 16\}$  and Nancy's is  $\{F_N^e, M_N^e\} = \{9, 9\}$ .

1. If they do not trade, what is Abe's utility? Nancy's?
2. Forget Nancy for this question. Suppose Abe can have 100 units total of  $F$  and  $M$ . How much does he want of each?
3. Find a trade that would make both better off, but favors Abe. Hint: the best trade for Abe is hard to find, but using Abe's marginal utility of Food with respect to Medicine,  $\frac{dU_A}{dF}$ , and Nancy's  $\frac{dU_N}{dF}$  you can fashion a trade that benefits both, moves toward the optimum and heavily favors him. Prove that your choice works.
4. Find a trade that would make both better off, but favors Nancy, and prove that it works.
5. Suppose Abe's utility is as valuable to society as Nancy's. What would maximize social welfare  $W$ ? Is this solution Pareto optimal? Hint: equate marginal utilities.
6. Given these answers, propose a trade between Abe and Nancy you think is fair, and defend your choice.
7. (Extra credit) Suppose there's a third person, Zoe, with the same utility function as Abe and Nancy, but  $\{F_Z^e, M_Z^e\} = \{64, 16\}$ . Propose an Abe/Nancy trade that's better for Nancy than the best offer Nancy will get from Zoe. Why are Zoe's opportunities to gain from trade less than Abe's or Nancy's? How might this change if there were three goods instead of two?

## Health Economics Questions And Answers:

Theoretical Health Economics Hans Keiding, 2017-07-24 As a relatively young discipline health economics as it appears today contains many features which can be traced back to its beginnings Since it arose in the interface between the medical sciences and economics the way of dealing with problems were often influenced by traditions which were well established in the medical profession while the classical way of thinking of economists came was filtering through at a slower pace This means that much of both teaching and research in health economics puts the emphasis on collecting and analysing data on health and healthcare as well as on public and private outlays on healthcare This is an extreme useful and worthwhile activity and much new and valuable information is produced in this way but occasionally there is a need for in depth understanding of what is going on rather than an estimated equation which comes from nowhere This is where economic theory can offer some support The present book is an introduction to health economics where the emphasis is on theory with the aim of providing explanation of phenomena as far as possible given the current level of economics *Healthcare Economics Made Easy, second edition* Daniel Jackson, 2017-07-15 Highly Commended in the BMA Medical Book Awards 2018 Here s what the judges said This is one of the few textbooks I would suggest every clinician reads Healthcare Economics Made Easy 2e is a clear and concise text written for healthcare professionals and students who need to understand the basics of the subject but who do not want to wade through a specialist health economics text This new edition builds on the success of the first edition by adding new chapters which provide a comparison across several western economies as well as a consideration of the US healthcare system Healthcare Economics Made Easy 2e will equip the reader with the necessary skills to make valid decisions based on the economic data and with the background knowledge to understand the health economics literature This book provides insight into the economic methods that are used to promote public health policies the techniques used for grading and valuing evidence and the statistics relied upon without trying to re train the reader as a health economist If you are left bemused by terms such as QALY health utility analysis and cost minimisation analysis then this is the book for you From reviews of the first edition This is a clearly written and accessible introduction to health economics This book should prove useful to all those responsible for planning and delivering health service It is a quick read but also a useful reference for the desk I would commend this book as a means by which people can better understand both the impact of their own practice on our health economy and also appreciate the methods that are being adopted to determine clinical practice at a regional and super regional level Ulster Medical Journal 2014 **Healthcare Economics Made Easy, third edition** Daniel Jackson, 2021-06-19 Healthcare Economics Made Easy third edition is a clear and concise text written for those working in healthcare who need to understand the basics of the subject but who do not want to wade through a specialist health economics text It will equip the reader with the necessary skills to make valid decisions based on the economic data and with the background knowledge to understand the health economics literature This new edition builds on the success of the

second edition by updating the material on the NICE appraisal process and including new sections on health technology assessment in the USA and the key role of the Institute for Clinical and Economic Review This book provides insight into the economic methods that are used to promote public health policies the techniques used for grading and valuing evidence and the statistics relied upon without trying to re train the reader as a health economist If you are left bemused by terms such as QALY health utility analysis and cost minimization analysis then this is the book for you Second edition Highly Commended in the BMA Medical Book Awards Here s what the judges said This is one of the few textbooks I would suggest every clinician reads

**Challenging Health Economics** Gavin Mooney,2009-01-22 This book mounts a critique of current health economics and provides a better way of looking at the economics of health and health care It argues that health economics has been too dominated by the economics of health care and has largely ignored the impact of poverty inequality poor housing and lack of education on health It is suggested that some of the structural issues of economies particularly the individualism of neo liberalism which is becoming more and more pervasive across the globe need to be addressed in health economics The author instead proposes a form of collective decision making through communitarianism placing value on participation in public life and on institutions such as health care It is envisaged this form of decision making can be used at the local national or global levels For the last this would mean a major revamp of global institutions like the World Bank and the IMF Examples of the impact of the new paradigm on health policy in general but also more specifically on priority setting and equity are included
