unconscious biases Yet we are rarely conscious of such influences Self ignorance is not something to which human beings are immune In this book Quassim Cassam develops an account of self knowledge which tries to do justice to these and other respects in which humans aren't model epistemic citizens He rejects rationalist and other mainstream philosophical accounts of self knowledge on the grounds that in more than one sense they aren't accounts of self knowledge for humans Instead he defends the view that inferences from behavioural and psychological evidence are a basic source of human self knowledge On this account self knowledge is a genuine cognitive achievement and self ignorance is almost always on the cards As well as explaining knowledge of our own states of mind Cassam also accounts for what he calls substantial self knowledge including knowledge of our values emotions and character He criticizes philosophical accounts of self knowledge for neglecting substantial self knowledge and concludes with a discussion of the value of self knowledge This book tries to do for philosophy what behavioural economics tries to do for economics Just as behavioural economics is the economics of homo sapiens as distinct from the economics of an ideally rational and self homo economics so Cassam argues that philosophy should focus on the human predicament rather than on the reasoning and self knowledge of an idealized homo philosophicus

**Knowledge and Truth in Plato** Catherine Rowett, 2018-04-19. Several myths about Plato's work are decisively challenged by Catherine Rowett: the idea that Plato agreed with Socrates about the need for a definition of what we know, the idea that he set out to define justice in the Republic, the idea that knowledge is a kind of true belief or that Plato ever thought that it might be something like that, the idea that knowledge proper is propositional and that the Theaetetus was Plato's best attempt to define knowledge as a species of belief and that it only failed due to his incompetence. Instead, Rowett argues that Plato was replacing the failed methods of Socrates including his attempt to find a definition or single common factor and that he replaced those methods with methods derived from geometry including methods that involve inference from shadows to their originals, a method which Rowett calls the iconic method. As a result, we should see that Plato is presenting the knowledge that is acquired as non-propositional and pictorial in nature and that it is to be identified not with knowledge of facts nor of objects but of types, *types qua types*, types that stand to the tokens that are used in our enquiry as original to shadow. The book includes detailed studies of the Meno, Republic and Theaetetus and argues that the insights that Plato brings about the nature of conceptual knowledge, its importance in underpinning all other activities and about the notion of truth as it applies to conceptual competence are significant and should be taken seriously as a corrective to areas in which current analytic philosophy has lost its way.
