

REVIEW QUESTIONS

Note: Questions 6-2, 6-7, and 6-8 require knowledge about the relation between the area under the marginal cost curve and total costs. This relation is not examined in detail in the book. An instructor should review this relation in class before assigning these problems.

6-1. What four basic conditions characterize a competitive market?

- **A large number of either actual or potential buyers and sellers.**
- **Product homogeneity.**
- **Rapid dissemination of accurate information at low cost.**
- **Free entry and exit in the market.**

6-2. The short-run marginal cost of the Ohio Bag Company is $2Q$. Price is \$100. The company operates in a competitive industry. Currently, the company is producing 40 units per period. What is the optimal short-run output? Calculate the profits that Ohio Bag is losing through suboptimal output.

The optimal short-run output is where marginal cost = marginal revenue (in this case price). Therefore, the optimal output is 50 units. Current profits are $TR - TC = \$4,000 - \$1,600 = \$2,400$. Note: assuming no fixed costs, total costs are equal to the area under the marginal cost curve (area = $1/2BH$). Profits with optimal output = $\$5,000 - \$2,500 = \$2,500$. The firm is forgoing \$100 through suboptimal output choice.

6-3. Should a company ever produce an output if the managers know it will lose money over the period? Explain.

The firm should operate in the short run, as long as it obtains enough revenue to cover its variable costs. Revenue in excess of variable costs helps to cover fixed costs (which are incurred even if the firm does not operate).

Market Structures Chapter Answer:

Market Structure Analysis James H. Myers, Edward Tauber, 2011-08-15 Market Structure and Industrial Performance Claudio R. Frischtak, Richard S. Newfarmer, John H. Dunning, 1994 **International Integration, Market Structure and Prices** Yves Bourdet, 2024-11-01 Originally published in 1988 this study focusses on international economic integration in relation to the passenger car industry and market in the West European car making countries Germany France Italy Sweden and the UK in the second half of the 20th Century when the revival of protectionism was a key feature of the international trading system The book illustrates the interaction between international integration market structure and firm conduct and the political sphere at the national as well as the supranational level Unlike previous analyses of international integration this book concentrates on a single industry over a significant period Market Structure and Behavior Martin Shubik, Richard Levitan, 1980 Textbook on the economic theory of market behaviour in a market economy reviews economic models of perfect competition monopoly duopoly and oligopoly examines mathematical models for the economic analysis of product differentiation marketing inventory advertising and game theory in a non competitive market Bibliography graphs statistical tables *Unemployment, Market Structure and Growth* Rüdiger Wapler, 2012-12-06 In his Ph D thesis Rudiger Wapler analyses the causes of the persistently high unemployment rates especially in continental Europe Particular emphasis is placed on imperfect labour and product markets on the one hand and on the numerous links between unemployment innovations and growth on the other Hence Rudiger Wapler provides an important contribution towards a better understanding of both the development of labour markets as well as the dynamics of growth To aid readers with only little prior knowledge of labour markets the book presents the most common theories of unemployment 1 trade union models in which union bargaining power leads to wages above their market clearing level 2 efficiency wage models in which employers voluntarily pay higher wages in order to motivate or discipline their workers or to reduce the job turnover rate as well as 3 matching models in which unemployment is caused by the continuous turnover of jobs and workers In addition emphasis is placed on the fact that labour needs to be treated as heterogeneous a fact often neglected in the literature Subsequently these labour market foundations are integrated with modern theories of innovations and growth making the approach much more relevant and plausible Without doubt the generalisations of the models performed by Rudiger Wapler show that there are limits to such formal analysis Due to the increasing number of interdependencies it is doubtful whether even more complex models provide additional usable insights **SIE Exam Prep 2024-2025** Claire Georgette Wiman, SIE Exam Prep 2024 2025 1 000 Practice Questions with Detailed Answers and Full Explanations Including 6 Full Length Practice Exams is the definitive guide for anyone preparing to take the Securities Industry Essentials SIE Exam Whether you're entering the financial industry or looking to expand your credentials this book is an invaluable resource designed to ensure your success Comprehensive Coverage of All Exam Topics This book is meticulously structured to cover every aspect of the SIE Exam It

Microeconomics Study Guide
 Timothy Tregarthen, John Brock, Dale Deboer, 1999-12-15 *Technology and Market Structure* John Sutton, 2001-01-26 John Sutton sets out a unified theory that encompasses two major approaches to studying market while generating a series of novel predictions as to how markets evolve Traditionally the field of industrial organization has relied on two unrelated theories the cross section theory and the growth of firms theory to explain cross industry differences in concentration and

within industry skewness The two approaches are based on very different mathematical structures and few researchers have attempted to relate them to each other In this book John Sutton unifies the two approaches through a theory that rests on three simple principles The first two a survivor principle that says that firms will not pursue loss making strategies and an arbitrage principle that says that if a profitable opportunity is available some firm will take it suffice to define a set of possible outcomes The third the symmetry principle says that the strategy used by a new entrant into any submarket depends neither on the entrants identity nor on its history in other submarkets This allows researchers to bring together the roles of strategic interactions and of independence effects The result is that the considerations motivating the cross section tradition and those motivating the growth of firms tradition both drop out within a single game theoretic model This book follows Sutton s **Sunk Costs and Market Structure** published by MIT Press in 1991

Trade Policy and Market Structure Elhanan Helpman,Paul Krugman,1989-03-30 This sequel to Market Structure and Foreign Trade examines the new international trade s applied side It provides a compact guide to models of the effects of trade policy in imperfectly competitive markets as well as an up to date survey of existing knowledge which is extended by the authors useful interpretations of the results
