The Evolution of Galactic X-Ray Binaries J. Truemper, W.H.G. Lewin, W. Brinkmann, 2012-12-06 The idea to hold a conference on the Evolution of Close Binary X ray sources grew in the summer of 1984 At that time we were hoping that some new results would be harvested in the months to come which would stimulate further work We were particularly looking towards the Euro pean X ray Observatory EXOSAT for new contributions How lucky we were quite unexpected developments took place Just prior to the conference quasi periodic oscillations now known as QPO were discovered in three bright low mass X ray binaries GX 5 1 Sco X 1 and Cyg X 2 They played an important role at the meeting The possibility that QPOs imply a neutron star magnetic dipole field and a neutron star rotation period in the millisecond range received a lot of attention This is not surprising as it lends support to the idea suggested earlier that the 6 msec binary radio pulsar PSR 1953 29 evolved from a stage in which it was a bright low mass X ray binary There was special interest in the possibility of white dwarf collapse into a neutron star This is a particularly attractive way to form the bright low mass X ray binaries often referred to as galactic bulge sources It would allow for the possibility of a very young neutron star in a very old binary system The relatively high magnetic fields that one could infer from QPO could then be explained Disha 20 Year-wise JEE Advanced Previous Year Solved Papers 1 & 2 (2006 - 2025) 7th Edition | Answer Key validated with IIT-JEE JAB | PYQs Question Bank for JEE 2026, The 7th Edition of the book JEE Advanced 20 Year wise Previous Year Solved Papers 1 The book also provides the Trend Analysis of last 10 years in all the 3 subjects The book provides 100% detailed solutions to each

Transversity 2005 Dr. Vincenzo Barone, Philip G. Ratcliffe, 2006 The notion of transversity in hadronic physics has been with us for over 25 years Intriguing though it might have been for much of that time transversity remained an intangible and remote object of interest principally to a few theoreticians In recent years transversity and transverse spin effects in general have grown as both theoretical and experimental areas of active research This increasing attention has now matured into a thriving field with a driving force of its own The ever growing bulk of data on asymmetries in collisions involving transversely polarised hadrons demands a more solid and coherent theoretical basis for its description Indeed it now appears rather clear that transversity and other closely related properties play a significant role in such phenomena As part of a Ministry funded inter university Research Project this workshop was organised to gather together experimentalists and theoreticians engaged in investigating the nature of transverse spin in hadronic physics with the intent of favouring the exchange of up to date theoretical and experimental ideas and news on the subject Over 70 physicists took part and very nearly all the major
