The screenshot displays the LabVIEW software environment. On the left, the 'Main' window shows a block diagram of a control system. The diagram starts with a 'Call Component Menu' block, which is connected to an 'LCD: FindString' block. This is followed by two more 'Call Component Menu' blocks, each connected to a 'led1: TurnOn' and 'led2: TurnOn' block respectively. These blocks are then connected to a 'led' block. The 'led' block is connected to a 'Call Menu' block, which is connected to a 'Calculator' block. The 'Calculator' block contains the expression 'Counter = Counter + 1'. This is followed by a 'Delay' block set to '100 ms'. Finally, the 'Delay' block is connected to an 'END' block.

The right side of the interface shows a 3D model of a hardware system. The model is a green circuit board with various components. At the top, there is a row of eight push buttons. Below them are two red LEDs. In the center, there is a large red 7-segment display showing '8888'. Below the display is a green 16x8 character LCD. At the bottom, there is another row of eight push buttons. The board is populated with various electronic components, including resistors, capacitors, and integrated circuits. The background is a dark blue gradient.

Design Engineering Manual Mike Tooley, 2009-10-30 Design Engineering Manual offers a practical guide to the key principles of design engineering. It features a compilation of extracts from several books within the range of Design Engineering books in the Elsevier collection. The book is organized into 11 sections. Beginning with a review of the processes of product development and design, the book goes on to describe systematic ways of choosing materials and processes. It details the properties of modern metallic alloys including commercial steels, cast irons, superalloys, titanium alloys, structural intermetallic compounds, and aluminum alloys. The book explains the human system interface procedures to assess the risks associated with job and task characteristics and environmental factors that may be encountered at work and affect behavior. Product liability and safety rules are discussed. The final section on design techniques introduces the design process from an inventor's perspective to a more formal model called total design. It also deals with the behavior of plastics that influence the application of practical and complex engineering equations and analysis in the design of products. Provides a single source of critical information to the design engineer, saving time and therefore money on a particular design project. Presents both the fundamentals and advanced topics and also the latest information in key aspects of the design process. Examines all aspects of the design process in one concise and accessible volume.

Radiological Risk Assessment and Environmental Analysis John E. Till, Helen A. Grogan, 2008-07-10 Radiological Risk Assessment and Environmental Analysis comprehensively explains methods used for estimating risk to people exposed to radioactive materials released to the environment by nuclear facilities or in an emergency such as a nuclear terrorist event. This is the first book that merges the diverse disciplines necessary for estimating where radioactive materials go in the environment and the risk they present to people. It is not only essential to managers and scientists but is also a teaching text. The chapters are arranged to guide the reader through the risk assessment process, beginning with the source term where the radioactive material comes from and ending with the conversion to risk. In addition to presenting mathematical models used in risk assessment, data is included so the reader can perform the calculations. Each chapter also provides examples and working problems. The book will be a critical component of the rebirth of nuclear energy now taking place as well as an essential resource to prepare for and respond to a nuclear emergency.

The POT Code Clarence E. Lee, 1961 This report describes a code, the POT code, designed to transcribe the output tapes of LB 1 and LB 2 into a standard input tape from which the neutron transport calculations can be performed by the TOP code LAMS 2523.
