Composite construction using a reinforced concrete slab on top of steel girders is an economical and popular form of
construction for highway bridges This book covers the design of continuous composite bridges with both compact and non
compact sections and simply supported composite bridges with the slab on beam form of construction Part One provides
advice on the general considerations for design the initial design process and the verification of structural adequacy in
accordance with BS 5400 The determination of design forces throughout the slab is described and key features relating to
slab design are identified Advice on structural detailing is also given Part Two provides worked examples for a four span
bridge three span bridge and for the deck slab of a simply supported bridge Each example is presented as a series of
calculation sheets with accompanying commentary and advice given on facing pages Design Guide for Composite Highway
