Leisure's Legacy Robert A. Stebbins,2017-07-17 This book illustrates how leisure as with other complex ideas that hold

currency in today's world suffers at the level of common sense due to a combination of oversimplification, moral depreciation and even lack of recognition. Leisure's modern legacy is both profound and immense as a product of approximately 45 years of steady research, application and theory development. The common sense view of free time activities therefore can and should be challenged. Stebbins provides this confrontation by tackling four particular themes that gatekeepers within the institutions of higher education and funding agencies for research often fail to attach adequate resources to the idea of leisure that the general population are guided by certain common sense definitions and largely unaware of how an informed view of free time could be beneficial that practitioners within certain fields continue to refuse to engage with the idea of leisure despite its benefit for their clients and that the weak reception of the science of leisure within mainstream social sciences suggests a similarly warped understanding of how people use their free time. Leisure's Legacy will be of interest to scholars of Leisure Studies and all those wishing to learn more about the vital importance of leisure in modern Western society.

From Development to Degeneration and Regeneration of the Nervous System Charles E. Ribak, 2009. This book provides current information about the three areas mentioned in the title: Neuronal Migration and Development, Degenerative Brain Diseases and Neural Plasticity and Regeneration. The chapters about brain development examine the cellular and molecular mechanisms by which neurons are generated from the ventricular zone in the forebrain and migrate to their destinations in the cerebral cortex. This description of cortical development also includes a discussion of the Cajal-Retzius cell. Another chapter provides insight about the development of another forebrain region, the hypothalamus. The remaining chapters of this section examine the clinical relevance of brain development in certain disease states in humans: neural tube defects and the normal and abnormal development of human electroencephalographic recordings during the first year of age. The second section on degenerative disorders of the brain begins with details about the dopaminergic neurons in the substantia nigra and their loss in Parkinson's disease. Two subsequent chapters describe changes in brain aging, including changes in the numbers of myelinated axons. Other chapters in this section describe important cellular and molecular changes found in Alzheimer's disease and human epilepsy. Together, these chapters summarize much of our current knowledge about the major molecular and cellular changes found in several degenerative diseases of the brain. The last section addresses the issues of brain plasticity and regeneration in the adult brain and begins with a chapter on how the brain's own stem cells provide newly generated neurons to the hippocampal dentate gyrus and how these neurons become integrated into neural circuitry. The following two chapters examine some of the neuroplastic changes that take place in motor and sensory cortices of awake behaving primates. The concluding two chapters address the issue of regeneration in the injured spinal cord and the factors that may contribute to its success.

**Reclaiming Development** Kari Levitt, 2005 For over 20 years the developing world has been adjusting to the agendas of the International Monetary Fund and the World Bank In the 1990s Structural Adjustment Programmes were repackaged and marketed as the coming of the golden age of globalisation promising benefits to countries that adopt neo liberal policies Whether by convention or apparent absence of viable alternatives Caribbean governments have been quick to implement

policies of deregulation liberalisation and privatisation In this they have been supported by their intellectuals who have been equally quick in embracing globalisation and too ready to concede the end of national sovereignty Kari Levitt argues that it is time to reclaim the right to development and the right of nations to engage in the international economy on their own terms She advocates an international rule based order which permits space for member countries to follow divergent paths to development according to their own philosophies institutions cultures and societal priorities This book represents a historic sweep of Caribbean thought and personalities over the past 30 years drawn against the background of the changes in the international political economy Whether in her collaboration with Lloyd Best on the Plantation Economy Model her analyses of Debt and Adjustment or her insistence on the right of sovereign nations to pursue their own development path Kari Levitt remains consistent in her conviction that development whether of individuals or nations must be rooted in time and place and cannot be imposed by external prescription

Femia, 1998-10-19 What do classical elitists like Pareto and Mosca have in common with Marxists like Labriola and Gramsci In this collection of essays Joseph Femia argues that all four thinkers are united by the worldly humanism they inherited from Machiavelli Their distinctively Italian hostility to the metaphysical abstractions of
