Swatton, 2008-04-30 The new European Joint Aviation Requirements JARs lay down rules governing the minimum levels of performance which must be attained by every type of public transport aeroplane. These rules cover matters such as weight, altitude and temperature, take off and landing distance, cruise flight level and speed and descent angle and rate. The subject of aircraft performance forms an important part of all JAR Flight Crew Licensing examinations for commercial and airline transport pilot licences and this book provides a clear but authoritative text on a difficult topic. It will also be of interest to commercial pilots needing to upgrade their annual ground test to JAR standards and to flight planners, operations controllers and airport operators.

This Second Edition brings the picture fully up to date incorporating new discussion on the strategies of low cost carriers and the significance of the aircraft cabin for long haul operations. Latest developments in aircraft products are covered and there are fresh examples of best practice in airline fleet planning techniques. The book is essential reading for airline planners with fleet planning responsibility, consultancy groups, analysts studying aircraft performance and economics, airline operational personnel, students of air transport, leasing companies, aircraft value appraisers and all who manage commercial aircraft acquisition programmes and provide strategic advice to decision makers.
