Runway Overrun and Collision Southwest Airlines Flight 1248, Boeing 737-7H4, N471WN, Chicago Midway International Airport, Chicago, Ill, December 8, 2005 United States. National Transportation Safety Board,2007 On December 8 2005 about 1914 central standard time Southwest Airlines SWA flight 1248 a Boeing 737 7H4 N471WN ran off the departure end of runway 31C after landing at Chicago Midway International Airport Chicago Illinois The airplane rolled through a blast fence an airport perimeter fence and onto an adjacent roadway where it struck an automobile before coming to a stop A child in the automobile was killed one automobile occupant received serious injuries and three other automobile occupants received minor injuries Eighteen of the 103 airplane occupants 98 passengers 3 flight attendants and 2 pilots received minor injuries and the airplane was substantially damaged The airplane was being operated under the provisions of 14 Code of Federal Regulations Part 121 and had departed from Baltimore Washington International Thurgood Marshall Airport Baltimore Maryland about 1758 eastern standard time Instrument meteorological conditions prevailed at the time of the accident flight which operated on an instrument flight rules flight plan The National Transportation Safety Board determined that the probable cause of this accident was the pilots failure to use available reverse thrust in a timely manner to safely slow or stop the airplane after landing which resulted in a runway overrun This failure occurred because the pilots first experience and lack of familiarity with the airplane autobrake system distracted them from thrust reverser usage during the challenging landing snip The safety issues discussed in this report include the flight crew s decisions and actions the clarity of

assumptions used in on board performance computers SWA policies guidance and training arrival landing distance assessments and safety margins runway surface condition assessments and braking action reports airplane based friction measurements and runway safety areas P ix

**Decision Making in Aviation** Don Harris,2017-07-05 Decision making pervades every aspect of life people make hundreds of decisions every day The vast majority of these are trivial and without a right or wrong answer In some respects there is also nothing extraordinary about pilot decision making It is only the setting that is different the underlying cognitive processes are just the same However it is the context and the consequences of a poor decision which serve to differentiate aeronautical decision making Decisions on the flight deck are often made with incomplete information and while under time pressure The implications for inadequate performance is much more serious than in many other professions Poor decisions are implicated in over half of all aviation accidents This volume contains key papers published over the last 25 years providing an overview of the major paradigms by which aeronautical decision making has been investigated Furthermore decision making does not occur in isolation It is a joint function of the flight tasks knowledge equipment on the flight deck and other stressors In this volume of collected papers works from leading authors in the field consider all these aspects of aeronautical decision making

**Aerospace Physiology**

Steven C. Martin, 2021-08-29 Aerospace physiology sometimes called flight or aviation physiology human factors or aeromedical factors is the scientific discipline studying the effects of flight conditions on human physiological and cognitive systems teaching aviators to work and function at peak efficiency in the abnormal environment of flight This information is introduced to pilots throughout their initial training including hypoxia spatial disorientation visual illusions fatigue trapped gases and many others The problem is all of these issues still create problems as well as fatalities for pilots on a regular basis even today Why Pilots may know about the information but fail to completely understand it This book will transform a pilot's potential misinterpretation of this subject matter into definitive action on the flight deck The newest most authoritative and comprehensive resource on this critical subject is Aerospace Physiology Aeromedical and Human Performance Factors for Pilots a pilot's number one source for enhancing safety of flight for all pilot experience levels As well as providing practical and realistic human performance information for private and professional pilots this book has been specifically written for use in academic settings unlike other books on this subject matter This book is currently the preferred text on flight physiology for the world renowned University of North Dakota's John D Odegard School of Aerospace Sciences The book contains 22 chapters discussing each topic thoroughly using the primacy of learning format and in an understandable manner complete with chapter core competency questions Each topic is covered in detail with environmental causes potential physiological cognitive responses followed by effective and proven anticipation mitigation strategies The book uses the most current research and experience based information combined with current incidents and accidents illustrating how these issues present themselves in real flight environments as well as how those accidents may have been prevented The information in this book is based on Mr Martin's 30 years of military and civilian aviation experience and is modeled after the US Air Force's Physiological Training Program for pilots and the comprehensive European Union Aviation Safety Agency's EASA flight physiology human performance standards Using Aerospace Physiology as your resource for aerospace physiology information will elevate the standard of training to its highest levels regarding this crucial knowledge
