Advanced Materials and Technologies for Micro/Nano-Devices, Sensors and Actuators Evgeni Gusev, Eric Garfunkel, Arthur Dideikin, 2010-03-15 A NATO Advanced Research Workshop ARW entitled Advanced Materials and Technologies for Micro Nano Devices Sensors and Actuators was held in St Petersburg Russia from June 29 to July 2 2009 The main goal of the Workshop was to examine at a fundamental level the very complex scientific issues that pertain to the use of micro and nano electromechanical systems MEMS and NEMS devices and technologies in next generation commercial and defense related applications Micro and nano electromechanical systems represent rather broad and diverse technological areas such as optical systems micromirrors waveguides optical sensors integrated subsystems life sciences and lab equipment micropumps membranes lab on chip membranes microfluidics sensors bio sensors chemical sensors gas phase sensors sensors integrated with electronics and RF applications for signal transmission variable capacitors tunable filters and antennas switches resonators From a scientific viewpoint this is a very multi disciplinary field including micro and nano mechanics such as stresses in structural materials electronic effects e.g. charge transfer general electrostatics materials science surface chemistry interface science nano tribology and optics It is obvious that in order to overcome the problems surrounding next generation MEMS NEMS devices and applications it is necessary to tackle them from different angles theoreticians need to speak with mechanical engineers and device engineers and modelers to listen to surface physicists It was therefore one of the main objectives of the workshop to bring together a multidisciplinary team of distinguished researchers

Introduction to Microsystem Packaging Technology Yufeng Jin, Zhiping Wang, Jing Chen, 2017-12-19 The multi billion

dollar microsystem packaging business continues to play an increasingly important technical role in today's information industry. The packaging process including design and manufacturing technologies is the technical foundation upon which function chips are updated for use in application systems and it is an important guarantee of the continued growth of technical content and value of information systems.

Introduction to Microsystem Packaging Technology details the latest advances in this vital area which involves microelectronics, optoelectronics, RF and wireless MEMS and related packaging and assembling technologies. It is purposefully written so that each chapter is relatively independent and the book systematically presents the widest possible overview of packaging knowledge. It elucidates the evolving world of packaging technologies for manufacturing. The authors begin by introducing the fundamentals, history and technical challenges of microsystems. Addressing an array of design techniques for packaging and integration, they cover substrate and interconnection technologies, examples of device and system level packaging and various MEMS packaging techniques. The book also discusses module assembly and optoelectronic packaging, reliability methodologies and analysis and prospects for the evolution and future applications of microsystems packaging and associated environmental protection. With its research examples and targeted reference questions and answers to reinforce understanding, this text is ideal for researchers, engineers and students involved in microelectronics and MEMS. It is also useful to those who are not directly engaged in packaging but require a solid understanding of the field and its associated technologies.

MEMS and Nanotechnology for Gas Sensors Sunipa Roy, Chandan Kumar Sarkar, 2017-12-19

How Can We Lower the Power Consumption of Gas Sensors? There is a growing demand for low power, high density gas sensor arrays that can overcome problems relative to high power consumption. Low power consumption is a prerequisite for any type of sensor system to operate at optimum efficiency. Focused on fabrication friendly microelectromechanical systems (MEMS) and other areas of sensor technology, *MEMS and Nanotechnology for Gas Sensors* explores the distinct advantages of using MEMS in low power consumption and provides extensive coverage of the MEMS/nanotechnology platform for gas sensor applications. This book outlines the microfabrication technology needed to fabricate a gas sensor on a MEMS platform. It discusses semiconductors, graphene, nanocrystalline ZnO based microfabricated sensors and nanostructures for volatile organic compounds. It also includes performance parameters for the state of the art of sensors and the applications of MEMS and nanotechnology in different areas relevant to the sensor domain. In addition, the book includes an introduction to MEMS materials and a historical background of MEMS. A concept for cleanroom technology, the substrate materials used for MEMS, two types of deposition techniques including chemical vapour deposition (CVD), the properties and types of photoresists and the photolithographic processes, different micromachining techniques for the gas sensor platform and bulk and surface micromachining, the design issues of a microheater for MEMS based sensors, the synthesis technique of a nanocrystalline metal oxide layer, a detailed review about graphene, its different deposition techniques and its important electronic, electrical and mechanical properties with its
