

## CONTROLS

### Shift Lever (gear transmission models)

This lever is used to select one of the five forward speeds, NEUTRAL, or REVERSE. 1st, 2nd and 3rd gears are recommended for varying mowing conditions. 4th and 5th gears are used when not mowing and greater ground speed is desired. Cut quality will suffer if you attempt to mow using 4th or 5th gear.

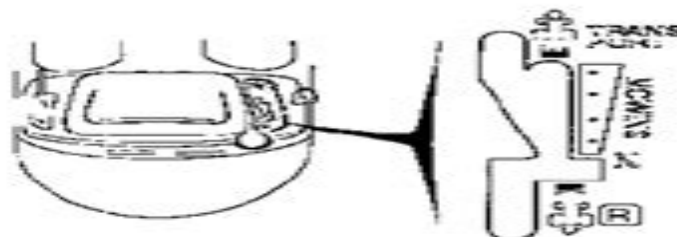

Moving the shift lever to NEUTRAL permits you to release the clutch pedal when the riding mower is stopped and the engine is running.

REVERSE is used to back up the riding mower.

You can damage the transmission of the riding mower if you move the shift lever between REVERSE and any forward gear without coming to a full stop. Press on the brake pedal (if needed) to bring the riding mower to a full stop before moving the shift lever.

### Shift Lever (hydrostatic transmission model)

This lever is used to select the travel (ground) speed of the riding mower. Moving the shift lever out of NEUTRAL will cause the riding mower to move. Small movements of the shift lever will in turn cause small changes in travel speed.

The MOWING range is for mowing. REVERSE is used to backup and TRANSPORT offers faster travel speeds when driving the riding mower to and from the mowing area. Cut quality will suffer if you attempt to mow in the TRANSPORT range.
