Differential Geometry - Proceedings Of The Symposium In Honor Of Prof Su Buchin On His 90th Birthday

Chaohao Gu, Hesheng Hu, Yuanlong Xin, 1993-02-04 The main topics covered in this volume are global differential geometry and its application to physics Recent results in many areas are presented including Yang Mills fields harmonic maps geometry of submanifolds spectral geometry complex geometry and soliton aspects of nonlinear PDE arising from geometry and mathematical physics *Research Problems in Discrete Geometry* Peter Brass, William O. J. Moser, János

Pach, 2006-01-27 Although discrete geometry has a rich history extending more than 150 years it abounds in open problems that even a high school student can understand and appreciate Some of these problems are notoriously difficult and are intimately related to deep questions in other fields of mathematics But many problems even old ones can be solved by a clever undergraduate or a high school student equipped with an ingenious idea and the kinds of skills used in a mathematical olympiad *Research Problems in Discrete Geometry* is the result of a 25 year old project initiated by the late Leo Moser It is a collection of more than 500 attractive open problems in the field The largely self contained chapters provide a broad overview of discrete geometry along with historical details and the most important partial results related to these problems This book is intended as a source book for both professional mathematicians and graduate students who love beautiful mathematical questions are willing to spend sleepless nights thinking about them and who would like to get involved in mathematical research Important features include More than 500 open problems some old others new and never before published Each chapter divided into self contained sections each section ending with an extensive bibliography A great selection of research problems for graduate students looking for a dissertation topic A comprehensive survey of discrete geometry highlighting the frontiers and future of research More than 120 figures A preface to an earlier version written by the late Paul Erdos Peter Brass is Associate Professor of Computer Science at the City College of New York William O J Moser is Professor Emeritus at McGill University János Pach is Distinguished Professor at The City College of New York Research Professor at the Courant Institute NYU and Senior Research Fellow at the Rényi Institute Budapest *The Honors*

Class Ben Yandell, 2001-12-12 This eminently readable book focuses on the people of mathematics and draws the reader into their fascinating world In a monumental address given to the International Congress of Mathematicians in Paris in 1900 David Hilbert perhaps the most respected mathematician of his time developed a blueprint for mathematical research in the new century *United States Air Force Academy Preparatory School Catalog* United States Air Force Academy. Preparatory

School, 1980 **Geometry, Mechanics, and Dynamics** Paul Newton, Phil Holmes, Alan Weinstein, 2006-05-11 Jerry Marsden one of the world's pre eminent mechanics and applied mathematicians celebrated his 60th birthday in August 2002 The event was marked by a workshop on Geometry Mechanics and Dynamics at the Fields Institute for Research in the Mathematical Sciences of which he was the founding Director Rather than merely produce a conventional proceedings with

relatively brief accounts of research and technical advances presented at the meeting we wished to acknowledge Jerry's influence as a teacher a propagator of new ideas and a mentor of young talent Consequently starting in 1999 we sought to collect articles that might be used as entry points by students interested in fields that have been shaped by Jerry's work At the same time we hoped to give experts engrossed in their own technical niches an indication of the wonderful breadth and depth of their subjects as a whole This book is an outcome of the efforts of those who accepted our invitations to contribute It presents both survey and research articles in the several fields that represent the main themes of Jerry's work including elasticity and analysis fluid mechanics dynamical systems theory geometric mechanics geometric control theory and relativity and quantum mechanics The common thread running through this broad tapestry is the use of geometric methods that serve to unify diverse disciplines and bring a wide variety of scientists and mathematicians together speaking a language which enhances dialogue and encourages cross fertilization

Plateau's Problem Frederick J. Almgren (Jr.), 1966 There have been many wonderful developments in the theory of minimal surfaces and geometric measure theory in the past 25 to 30 years Many of the researchers who have produced these excellent results were inspired by this little book or by Fred Almgren himself The book is indeed a delightful invitation to the world of variational geometry A central topic is Plateau's Problem which is concerned with surfaces that model the behavior of soap films When trying to resolve the problem however one soon finds that smooth surfaces are insufficient Varifolds are needed With varifolds one can obtain geometrically meaningful solutions without having to know in advance all their possible singularities This new tool makes possible much exciting new analysis and many new results Plateau's problem and varifolds live in the world of geometric measure theory where differential geometry and measure theory combine to solve problems which have variational aspects The author's hope in writing this book was to encourage young mathematicians to study this fascinating subject further Judging from the success of his students it achieves this exceedingly well
