Accessible Tourism Dimitrios Buhalis,Simon Darcy,2011 Inclusion disability an ageing population and tourism are increasingly important areas of study due to their implications for both tourism demand and supply This book therefore sets out to explore and document the current theoretical approaches foundations and issues in the study of accessible tourism In drawing together the contributions to this volume the editors have applied broader social constructionist approaches to understanding the accessible tourism phenomena Accessible tourism as with any area of academic study is an evolving field of academic research and industry practice As with other areas of tourism the field is multidisciplinary and is influenced by various disciplines including geography disability studies economics public policy psychology and marketing As one would expect from two scholars at the height of their academic abilities Dimitrios Buhalis and Simon Darcy have delivered a timely and much needed contribution to the under served area of accessible tourism Harnessing the best conceptual developments on the topic Accessible Tourism is a scholarly yet hugely readable collection and readily communicates the various contributors passion for and command of their subject This collection is a must have text for anyone engaged in the theory practice and policy of accessible tourism and will be essential reading on undergraduate and postgraduate courses across a range of disciplines and fields I cannot speak highly enough of this endeavour and I m sure it will take accessible tourism and universal design debates into the mainstream of academic enquiry and industry practice Professor Nigel Morgan The Welsh Centre for Tourism Research University of Wales Institute Cardiff Wales

Flow-induced Vibrations: an Engineering Guide Eduard Naudascher,2017-11-13 Designed for engineers this work considers flow induced vibrations It covers topics such as body oscillators fluid loading and response of body oscillators fluid oscillators vibrations due to extraneously induced

excitation and vibrations due to instability induced excitation *Principles and Methods of Pocket Park Planning and Design*
Conghui Zhou, 2025-07-31 This book focuses on the planning and design methods of pocket parks in the disciplines of urban planning and landscape architecture It fills the gap in the current pocket park planning by innovatively exploring the service mechanism and planning methods of the pocket parks to alleviate the scarcity of outdoor recreational spaces in the high density environments This book integrates the results of previous research and our latest research results Taking urban renewal as the planning scenario the book systematically introduces the basic characteristics of mini parks planning principles and methods and development promotion and assurance strategies This book is used as a textbook for planning and design courses as well as a professional reference book for urban planners and landscape architects The authors have also made great efforts to use simple language and a large number of visual illustrations in the text Through these approaches the authors expected that the publication of this book would not only facilitate teaching and practical application but also attract more interest and attention from ordinary people and motivate them to actively participate in the planning design and management of mini parks around them Only when this goal is achieved can the original value of mini park development be finally realized **Handbook of Standards and Guidelines in Human Factors and Ergonomics, Second Edition**

Soares, 2021-06-28 With an updated edition including new material in additional chapters this one of a kind handbook covers not only current standardization efforts but also anthropometry and optimal working postures ergonomic human computer interactions legal protection occupational health and safety and military human factor principles While delineating the crucial role that standards and guidelines play in facilitating the design of advantageous working conditions to enhance individual performance the handbook suggests ways to expand opportunities for global economic and ergonomic development This book features Guidance on the design of work systems including tasks equipment and workspaces as well as the work environment in relation to human capacities and limitations Emphasis on important human factors and ergonomic standards that can be utilized to improve product and process to ensure efficiency and safety A focus on quality control to ensure that standards are met throughout the worldwide market **Golf Course Management** ,2004 **Urban Development, Transport and the Environment** ,1995

Structural Studies, Repairs and Maintenance of Heritage Architecture XII C. A. Brebbia, 2011 Architectural heritage is now recognised to be of great importance to the historical identity of a region town or nation In order to take care of that heritage we need to look beyond borders and share experiences and knowledge regarding heritage preservation This book contains papers covering the latest advances in this field presented at the twelfth and latest in a series of now biennial conferences that began in 1989 The series is recognised as the most important conference on the topic It covers such topics as Heritage architecture and historical aspects Regional architecture Preservation of archaeological sites Maritime heritage Heritage masonry buildings Adobe restorations Wooden structures Structural issues and restoration Seismic vulnerability

and vibrations Assessment retrofitting and reuse of heritage buildings Surveying and monitoring Material characterisation and problems Simulation and modelling New techniques and materials Non destructive techniques Experimental validation and verification Performance and maintenance Environmental damage Social and economic aspects and Guidelines codes and regulations

Retrofitting of Heritage Structures S. Syngellakis, 2013 The preservation of heritage architecture is a cultural objective rigorously pursued by communities and nations wishing to promote their history civilisation and aesthetic achievements Structures built in the remote past by traditional methods have suffered the consequences of extreme loading events such as earthquakes over long time periods Retrofitting is an approach based on recent technological developments and scientific knowledge whereby modern construction methods and materials are applied to the repair and strengthening of historical structures This book aims to inform on current retrofitting techniques their application to various types of historical architecture and their effectiveness to fulfil their purpose Retrofitted structural forms covered in the book vary widely from age old places of worship such as churches mosques and temples as well as castles and palaces to more modern distinguished private residences or public buildings some of them designed by well known architects Their methods of construction range from traditional such as stone or brick masonry to more recent textile block systems and even reinforced concrete frameworks Reference is made to detailed visual inspections of damaged structure providing valuable insight into possible causes of failure such inspections are usually combined with material characterisation which is an essential input to numerical modelling for assessing the behaviour of the structure before and after retrofitting The book describes strengthening techniques for masonry walls including re pointing injection grouting and the use of steel ties The use of reinforced concrete is proposed in the form of cast in place walls jackets or tie beams that of carbon fibre reinforced laminates for strengthening walls and slabs Innovative use of materials such as shape memory alloys self compacting concrete or thin lead layers is also suggested Particular attention is given to methods for moderating the consequences of destructive earthquakes Seismic energy absorbing devices and base isolation systems are two effective means of providing protection against future seismic events although their application is often met with many technical challenges in practice Retrofitting of Heritage Structures Against Earthquakes will be of interest to members of academic institutions government or private cultural preservation establishments and specialist consultant engineers The book contains very practical technical advice on many issues this would be of considerable interest to construction companies specialising in repairs and maintenance of historical structures

Parizi, 2007-09-28 Everything important up to date and practical about turbopumps can be found in this book The material is arranged to cover the most important topics from basic theories to practical applications This book can also serve as a useful textbook for students who are taking courses in the area of turbopumps and hydraulic machineries It is the complete reference book for turbopumps

Flow-Induced Vibrations Eduard Naudascher, Donald

Rockwell,2012-03-27 Despite their variety the vibration phenomena from many different engineering fields can be classified into a relatively few basic excitation mechanisms The classification enables engineers to identify all possible sources of excitation in a given system and to assess potential dangers This graduate level text presents a synthesis of research results and practical experience from disparate fields in the form of engineering guidelines It is particularly geared toward assessing the possible sources of excitation in a flow system in identifying the actual danger spots and in finding appropriate remedial measures or cures Flow induced vibrations are presented in terms of their basic elements body oscillators fluid oscillators and sources of excitation By stressing these basic elements the authors provide a basis for the transfer of knowledge from one system to another as well as from one engineering field to another In this manner well known theories on cylinders in cross flow or well executed solutions from the field of wind engineering to name just two examples may be useful in other systems or fields on which information is scarce The unified approach is broad enough to permit treatment of the major excitation mechanism yet simple enough to be of practical use
