An Engineers Guide to MATLAB with

Applications from Mechanical, Aerospace, Electrical, Civil and Biological Systems Engineering Edward B. Magrab, 2010

What Every Engineer Should Know about MATLAB® and Simulink® Adrian B. Biran, 2010-07-20 MATLAB can be used to execute many mathematical and engineering calculations as well as a handheld computer can if not better. Moreover, like many other computer languages, it can perform tasks that a handheld computer cannot. Compared to other computer languages, MATLAB provides many built-in functions that make learning easier and reduce prototyping time. Simulink is a toolbox that extends the possibilities of MATLAB by providing a graphical interface for modeling and simulating dynamical processes. Using examples from mathematics, mechanical and electrical engineering, and control and signal processing, *What Every Engineer Should Know About MATLAB and Simulink* provides an introduction to these two computer environments and examines the advantages and limitations of MATLAB. It first explores the benefits of how to use MATLAB to solve problems and then process and present calculations and experimental results. This book also briefly introduces the reader to more advanced features of the software, such as object-oriented programming (OOP), and it draws the attention to some specialized toolboxes. Key features of the book include demonstrations of how to visualize the results of calculations in various kinds of graphical representations, write useful script files and functions for solving specific problems, avoid disastrous computational errors, convert calculations into technical reports, and insert calculations and graphs into either MS Word or LaTeX. This book illustrates the limitations of the computer as well as the implications associated with errors that can result from approximations or numerical errors. Using selected examples of computer-aided errors, the author explains that the set of computer numbers is discrete and bounded, a feature that can cause catastrophic errors if not properly taken into account. In conjunction with The Mathworks marketers of MATLAB and Simulink, a supplementary website is presented to offer access to software implemented in the book and the script files used to produce the figures. This book was written by Adrian B. Biran of Technion Israel Institute of Technology, with contributions by Moshe Breiner, managing director of SimACon. *Engineering Applications* Mihai Dupac, Dan B. Marghitu, 2021-03-24 **ENGINEERING APPLICATIONS** A comprehensive text on the fundamental principles of mechanical engineering, *Engineering Applications* presents the fundamental principles and applications of the statics and mechanics of materials in complex mechanical systems design. Using MATLAB to help solve problems with numerical and analytical calculations, authors and noted experts on the topic, Mihai Dupac and Dan B. Marghitu, offer an understanding of the static behaviour of engineering structures and components while considering the mechanics of materials knowledge as the most important part of their design. The authors explore the concepts, derivations, and interpretations of general principles and discuss the creation of mathematical models and the formulation of mathematical equations. This practical text also highlights the solutions of problems solved analytically and numerically using MATLAB. The figures generated with MATLAB reinforce visual learning for students and professionals as they study the programs. This important text shows how mechanical principles are applied to engineering design. Covers basic material with both

mathematical and physical insight Provides an understanding of classical mechanical principles Offers problem solutions using MATLAB Reinforces learning using visual and computational techniques Written for students and professional mechanical engineers Engineering Applications helpshone reasoning skills in order to interpret data and generate mathematical equations offering different methods of solving them for evaluating and designing engineering systems
