Simulation, Modeling, and Programming for Autonomous Robots Noriako Ando,Stephen Balakirsky,Thomas Hemker,Monica Reggiani,Oskar von Stryk,2010-11-05 Why are the many highly capable autonomous robots that have been promised for novel applications driven by society industry and research not available day despite the tremendous progress in robotics science and systems achieved during the last decades Unfortunately steady improvements in speci c robot abilities and robot hardware have not been matched by corresponding robot performance in real world environments This is mainly due to the lack of vancements in robot software that master the development of robotic systems of ever increasing complexity In addition fundamental open problems are still awaiting sound answers while the development of new robotics applications s fersfromthelackofwidelyusedtools libraries andalgorithmsthataredesigned in a modular and performant manner with standardized interfaces Simulation environments are playing a major role not only in reducing development time and cost e g by systematic software or hardware in the loop testing of robot performance but also in exploring new types of robots and applications H ever their use may still be regardedwith skepticism Seamless migrationof code using robot simulators to real world systems is still a rare circumstance due to the complexity of robot world sensor and actuator modeling These challenges drive the quest for the next generation of methodologies and tools for robot development The objective of the International Conference on Simulation Modeling and ProgrammingforAutonomous Robots SIMPAR is to o er a unique forum for these topics and to bring together researchersfrom academia and industry to identify and solve the key issues necessary to ease the development of increasingly complex robot software
