Formal Specification Level Concepts Methods And Algorithms:

Formal Specification Level Mathias Soeken,Rolf Drechsler,2014-11-12 This book introduces a new level of abstraction that closes the gap between the textual specification of embedded systems and the executable model at the Electronic System Level ESL Readers will be enabled to operate at this new Formal Specification Level FSL using models which not only allow significant verification tasks in this early stage of the design flow but also can be extracted semi automatically from the textual specification in an interactive manner The authors explain how to use these verification tasks to check conceptual properties e g whether requirements are in conflict as well as dynamic behavior in terms of execution traces

Automated Validation & Verification of UML/OCL Models Using Satisfiability Solvers Nils Przigoda,Robert Wille,Judith Przigoda,Rolf Drechsler,2018-01-22 This book provides a comprehensive discussion of UML OCL methods and design flow for automatic validation and verification of hardware and software systems While the presented flow focuses on using satisfiability solvers the authors also describe how these methods can be used for any other automatic reasoning engine Additionally the design flow described is applied to a broad variety of validation and verification tasks The authors also cover briefly how non functional properties such as timing constraints can be handled with the described flow

Intellectics and Computational Logic Steffen Hölldobler,2013-04-18 Intellectics seeks to understand the functions structure and operation of the human intellect and to test artificial systems to see the extent to which they can substitute or complement such functions The word itself was introduced in the early 1980s by Wolfgang Bibel to describe the united fields of artificial intelligence and cognitive science The book collects papers by distinguished researchers colleagues and former students of Bibel s all of whom have worked together with him and who present their work to him here to mark his 60th birthday The papers discuss significant issues in intellectics and computational logic ranging across automated deduction logic programming the logic based approach to intellectics cognitive robotics knowledge representation and reasoning Each paper contains new

previously unpublished reviewed results The collection is a state of the art account of the current capabilities and limitations of a computational logic based approach to intellectics Readership Researchers who are convinced that the intelligent behaviour of machines should be based on a rigid formal treatment of knowledge representation and reasoning *Correct Hardware Design and Verification Methods* George J. Milne, Laurence Pierre, 1993-05-12 These proceedings contain the papers presented at the Advanced Research Working Conference on Correct Hardware Design Methodologies held in Arles France in May 1993 and organized by the ESPRIT Working Group 6018 CHARME 2 and the Universit de Provence Marseille in cooperation with IFIP Working Group 10 2 Formal verification is emerging as a plausible alternative to exhaustive simulation for establishing correct digital hardware designs The validation of functional and timing behavior is a major bottleneck in current VLSI design systems slowing the arrival of products in the marketplace with its associated increase in cost From being a predominantly academic area of study until a few years ago formal design and verification techniques are now beginning to migrate into industrial use As we are now witnessing an increase in activity in this area in both academia and industry the aim of this working conference was to bring together researchers and users from both communities

Testing of Communicating Systems Bernd Baumgarten, Heinz-Jürgen Burkhardt, Alfred Giessler, 2013-06-05 This volume contains the proceedings of the IFIP WG 6 1 International Workshop on Testing of Communicating Systems IWTCS 96 held in Darmstadt Germany on September 9 through 11 1996 continuing the IFIP WG 6 1 series of International Workshops on Protocol Test Systems IWPTS In this series of working conferences held annually since 1988 many valuable contributions have been presented with an emphasis both on the OSI conformance testing methodology and framework as well as the standardization effort on formal methods in conformance testing While there are still open issues and divergencies between theory and practice in these fields the scope of the series started expanding to related fields of growing practical relevance for example to testing with regard to the B ISDN protocol reference model in particular ATM the ODP reference model and the Internet protocol suite as well as to interoperability testing and performance testing To reflect the extended scope the program committee agreed on a new name for this series of working conferences to be applied the first time to the 1996 conference However in order to emphasize the tradition of IWPTS the numbering of this series was continued such that IWTCS 96 is counted as the 9th International Workshop on Testing of Communicating Systems As in the years before the workshop aims at bringing together researchers and practitioners furthering the exchange of views and correlating the work of both sides **Advanced IT Tools** Nobuyoshi Terashima, Edward Altman, 2013-11-18 TRACK 1 Innovative Applications in the Public Sector The integration of multimedia based applications and the information superhighway fundamentally concerns the creation of a communication technology to support the activities of people Communication is a profoundly social activity involving interactions among groups or individuals common standards of exchange and national infrastructures to support telecommunications activities The contributions of the invited speakers and others in this track begin to

explore the social dimension of communication within the context of integrated information systems for the public sector Interactions among businesses and households are described by Ralf Strauss through the development within a real community of a wired city with information and electronic services provided by the latest telecommunications technologies A more specific type of interaction between teacher and student forms the basis of education John Tiffin demonstrates how virtual classrooms can be used to augment the educational process Carl Loeffler presents yet another perspective on interaction through the integration of AI and agent technologies to investigate the dynamics of complex behaviors within networked simulation environments Common standards for communication in the form of electronic documents or CSCW Computer Supported Cooperative Work according to Roland Traunmüller provide enabling technologies for a paradigm shift in the management of organizations As pointed out by William Olle the impact of standardization work on the future of information technology depends critically upon the interoperability of software systems

Algorithmics for Hard Problems Juraj Hromkovič, 2013-03-14 Algorithmic design especially for hard problems is more essential for success in solving them than any standard improvement of current computer technologies Because of this the design of algorithms for solving hard problems is the core of current algorithmic research from the theoretical point of view as well as from the practical point of view There are many general textbooks on algorithmics and several specialized books devoted to particular approaches such as local search randomization approximation algorithms or heuristics But there is no textbook that focuses on the design of algorithms for hard computing tasks and that systematically explains combines and compares the main possibilities for attacking hard algorithmic problems As this topic is fundamental for computer science this book tries to close this gap Another motivation and probably the main reason for writing this book is connected to education The considered area has developed very dynamically in recent years and the research on this topic discovered several profound results new concepts and new methods Some of the achieved contributions are so fundamental that one can speak about paradigms which should be included in the education of every computer science student Unfortunately this is very far from reality This is because these paradigms are not sufficiently known in the computer science community and so they are insufficiently communicated to students and practitioners
