Abstract The purpose of this study was to determine the effect of a 12-week, 30-min, 3 times per week, supervised, low-impact aerobically and resistance training program on the physical fitness and health-related quality of life of sedentary, middle-aged, obese women. The study was a randomized, controlled trial. The subjects were randomly assigned to either the exercise or control group. The exercise group performed a 12-week, 30-min, 3 times per week, supervised, low-impact aerobically and resistance training program. The control group did not exercise. The subjects were assessed at baseline and at 12 weeks. The exercise group showed significant improvements in physical fitness and health-related quality of life compared to the control group. The results of this study suggest that a 12-week, 30-min, 3 times per week, supervised, low-impact aerobically and resistance training program can improve the physical fitness and health-related quality of life of sedentary, middle-aged, obese women.
