- Click **Reset** (↺) and check that **Task 1** is selected in the dropdown menu.

**Introduction:** Lepidoptera sp. larvae (caterpillars) eat corn kernels, leaves, and stalks. In this activity, use genetic engineering techniques to create a corn plant that is resistant to caterpillars.

**Question:** How can we produce corn that is resistant to Lepidoptera sp. larvae?

1. **Observe:** Click **Play**. Select one of the strains of bacteria harmful to larvae (by clicking on the plate).

Which strain did you select? \_\_\_\_\_

2 and 4 additional strains were too severely impacted and perished.

2. **Investigate:** Click **Continue**. The screen now shows the **genome**, or set of genes, of the selected bacteria. One of these genes produces the protein that kills the caterpillars. You will test each gene by adding it to the genome of a bacteria that does not kill caterpillars. This process is called **transformation**.

Drag three genes into the Petri dishes at lower right. These genes are now inserted into the genomes of the sensitive bacteria in the plates. Press **Play**. If none of those genes help to kill the caterpillars, click **Reset** and try three other genes. When you find a gene that kills the caterpillars, click on the Petri dish to select the gene that confers resistance.

Which gene did you select? \_\_\_\_\_

Gene F

In reality, finding a gene with a desired trait is much less common. Scientists search through many more bacterial strains and potential genes to find the traits they are looking for.

3. **Observe:** Click **Continue**. **Promoters** are regions of DNA that initiate the **transcription** of a gene. Some promoters only work in specific types of cells, such as leaf cells or root cells.

To determine which cells of a corn plant a promoter works in, four promoters have been attached to the **Green Fluorescent Protein** (GFP) gene. Each promoter-GFP gene has been inserted into a corn plant. Select **Lights off** to see the parts of each plant glow green and fill in the table below.

Promoter	Glowing plant part(s)	Promoter	Glowing plant part(s)
1	Roots and leaves	3	Roots
2	leaves	4	leaves

Which promoter is active in only the leaves?

1 and 3

In the whole plant?

**Innovation, Dual Use, and Security** Jonathan B. Tucker, 2012-03-30 A framework for assessing the security risks of emerging dual use technologies and devising tailored governance strategies is proposed and applied to contemporary case studies Recent advances in disciplines such as biotechnology nanotechnology and neuropharmacology entail a dual use dilemma because they promise benefits for human health and welfare yet pose the risk of misuse for hostile purposes The emerging field of synthetic genomics for example can produce custom DNA molecules for life saving drugs but also makes possible the creation of deadly viral agents for biological warfare or terrorism The challenge for policymakers is to prevent the misuse of these new technologies without forgoing their benefits Innovation Dual Use and Security offers a systematic approach for managing the dual use dilemma The book presents a decision framework for assessing the security risks of emerging technologies and fashioning governance strategies to manage those risks This framework is applied to fourteen contemporary case studies including synthetic genomics DNA shuffling and directed evolution combinatorial chemistry protein engineering immunological modulation and aerosol vaccines The book also draws useful lessons from two historical cases the development of the V series nerve agents in Britain and the use and misuse of LSD by the U S Army and the CIA Innovation Dual Use and Security offers a

comprehensive multifaceted introduction to the challenges of governing dual use technologies in an era of rapid innovation. The book will be of interest to government officials and other practitioners as well as to students and scholars in security studies, science and technology studies, biology and chemistry.

**Molecular and Quantitative Animal Genetics** Hasan Khatib, 2015-03-02. Animal genetics is a foundational discipline in the fields of animal science, animal breeding and veterinary sciences. While genetics underpins the healthy development and breeding of all living organisms, this is especially true in domestic animals, specifically with respect to breeding for key traits. *Molecular and Quantitative Animal Genetics* is a new textbook that takes an innovative approach, looking at both quantitative and molecular breeding approaches. The book provides a comprehensive introduction to genetic principles and their applications in animal breeding. This text provides a useful overview for those new to the field of animal genetics and breeding, covering a diverse array of topics ranging from population and quantitative genetics to epigenetics and biotechnology. *Molecular and Quantitative Animal Genetics* will be an important and invaluable educational resource for undergraduate and graduate students and animal agriculture professionals. Divided into six sections, pairing fundamental principles with useful applications, the book's comprehensive coverage will make it an ideal fit for students studying animal breeding and genetics at any level.

**Artificial Neural Nets and Genetic Algorithms** David W. Pearson, Nigel C. Steele, Rudolf Albrecht, 2011-06-28. The 2003 edition of ICANNGA marks a milestone in this conference series because it is the tenth year of its existence. The series began in 1993 with the inaugural conference at Innsbruck in Austria. At that first conference, the organisers decided to organise a similar scientific meeting every two years. As a result, conferences were organised at Ales in France, 1995; Norwich in England, 1997; Portoroz in Slovenia, 1999; and Prague in the Czech Republic, 2001. It is a great honour that the conference is taking place in France for the second time. Each edition of ICANNGA has been special and had its own character. Not only that, participants have been able to sample the life and local culture in five different European countries. Originally limited to neural networks and genetic algorithms, the conference has broadened its outlook over the past ten years and now includes papers on soft computing and artificial intelligence in general. This is one of the reasons why the reader will find papers on fuzzy logic and various other topics not directly related to neural networks or genetic algorithms included in these proceedings. We have, however, kept the same name: International Conference on Artificial Neural Networks and Genetic Algorithms. All of the papers were sorted into one of six principal categories: neural network theory, neural network applications, genetic algorithm and evolutionary computation theory, genetic algorithm and evolutionary computation applications, fuzzy and soft computing theory, fuzzy and soft computing applications.

**lncRNAs in Cancer Metastasis and Therapy Resistance** Aamir Ahmad, Palmiro Poltronieri, Shahab Uddin, 2023-10-30. lncRNAs (long non-coding RNAs) are the relatively longer, more than 200 nucleotides long subtypes of ncRNAs (non-coding RNAs), i.e. the RNAs that do not code for any proteins. However, even without themselves being translated, lncRNAs impact the cellular gene expressions and functions in ways that are just beginning to be explored.

The metastasis of human cancers as well as acquired resistance against the administered therapeutics are two major factors responsible for the cancer associated mortality

*Science and Environmental Decision Making* Mark Huxham, David Sumner, 2000 Science is vital in informing the increasingly urgent and complex environmental decisions that affect all our lives from international agreements on action to limit climate change to decisions on growing genetically modified crops It is clear however that many environmental decisions are taken in the face of scientific uncertainty or ignorance and involve questions of politics and ethics that go beyond science Science alone cannot answers such questions as Are the risks of nuclear power acceptable and Why should we conserve wild species Science and Environmental Decision Making explores the use and limitations of science in helping to answer environmental questions emphasising the importance of ethics politics and sociology in the decision making process Starting with the question What is meant by a scientific explanation the first three chapters provide a simple introduction to the philosophy and sociology of science and the importance of these fields to environmental scientists They explain the logic of testing ideas in science and look at some of the absolute limits of scientific explanation showing how value judgements inevitably influence scientific work before exploring commercial and political influences on science Chapters 4 10 show how these themes are relevant in case studies ranging from genetic engineering in agriculture to conservation marine eutrophication and the use of models and radiation protection Each chapter is written by a researcher active in the area and begins with an editorial introduction highlighting the major themes illustrated by the case study This book is aimed at students of ecology environmental science environmental management and geography It will also be useful reading for sociology students who study how the science is applied
