

Activity B: Physics of projectile motion	Get the Gizmo ready: <ul style="list-style-type: none"> • Click Clear paths and select Atmosphere: None. • Turn off Show grid and Show paths. • You will need a scientific calculator for this activity. 	 <p>A diagram showing a green golf ball in flight against a light blue background. A green arrow points from the ball towards the upper right. From the tip of this arrow, two perpendicular component arrows emerge: a blue arrow pointing vertically upwards and a red arrow pointing horizontally to the right.</p>

Introduction: Velocity is an example of a **vector** quantity because it describes the speed and direction of an object. The velocity of an object through space can be shown by two components: a horizontal component (v_x) and a vertical component (v_y).

Question: How does the velocity of an object change as it flies through space?

1. **Observe:** Click **Reset**. Turn on **Show velocity vector** and **Show velocity components**. Set v_{initial} to 50 m/s and set θ to 45.0 degrees. Click **Play**. Focus on the blue and red arrows that represent the vertical and horizontal components of the golf ball's velocity.

- A. As the ball flies through the air, what do you notice about the blue (vertical) arrow?
- B. As the ball flies through the air, what do you notice about the red (horizontal) arrow?
- C. Try other velocities and launch angles. Do these results hold up?

It turns upside down.

It points towards the east.

Yes

2. **Calculate:** You can use trigonometry to find the initial horizontal and vertical components of the ball's velocity. Take out your calculator now. Click **Reset**, and turn off **Show velocity vector** and **Show velocity components**. Set v_{initial} to 50.0 m/s and θ to 60.0 degrees.

- A. To calculate v_x , multiply v_{initial} by the cosine of the angle: $v_x = v_{\text{initial}} \cdot \cos(\theta)$:
- B. To calculate v_y , multiply v_{initial} by the sine of the angle: $v_y = v_{\text{initial}} \cdot \sin(\theta)$:
- C. Turn on **Show velocity components**. Were you correct?

25

43.3

Yes

3. **Analyze:** An object flying through the air is said to be in free fall. As you observed, the horizontal component of velocity (v_x) does not change as the object moves, but the vertical component (v_y) decreases over time. (Note: Air resistance is not included in this model.)

- A. What force causes v_y to change as the golf ball travels?
- B. Why doesn't v_x change as the object travels? (Hint: Are there any horizontal forces acting on the ball?)

Gravity

Due to the lack of air resistance

Career In Theoretical Physics, A (2nd Edition) Philip W Anderson, 2005-01-26 This unique volume presents the scientific achievements of Nobel laureate Philip Anderson spanning the many years of his career

In this new edition the author has omitted some review papers as well as added over 15 of his research papers. As in the first edition he provides an introduction to each paper by explaining the genesis of the papers or adding some personal history. The book provides a comprehensive overview of the author's work which includes significant discoveries and pioneering contributions such as his work on the Anderson model of magnetic impurities and the concept of localization, the study of spin glasses, the fluctuating valence problem and superexchange, his prediction of the existence of superfluidity in He-3, his involvement in the discovery of the Josephson effect, his discovery of the Higgs mechanism in elementary particle physics and so on. The new papers added to this edition include Pressure Broadening in the Microwave and Infrared Regions, a condensation of most of the author's thesis, Ordering and Antiferromagnetism in Ferrites, the best known of the papers written by the author involving what are known as frustrated lattices and Localized Magnetic States in Metals, a paper mentioned in his Nobel Prize citation along with localization and superexchange, to name a few. A Career in Theoretical Physics Philip W Anderson, 1994-06-24. Theoretical physicist and Nobel Laureate Philip Anderson has been described as one of the most imaginative of condensed matter physicists working today. His achievements have not merely constituted significant discoveries in their own right but have also frequently set the agenda for the work of others. His pioneering contributions include the Anderson model of magnetic impurities and the concept of localisation, both of which were mentioned in his Nobel Prize citation. He also worked on the study of spin glasses, the fluctuating valence problem and superexchange. He predicted the existence of superfluidity in He-3 and provided a microscopic explanation and was involved in the discovery of the Josephson effect. The understanding of topics as diverse as the Higgs mechanism, pulsar glitches, high T_c superconductivity, flux creep and flow in superconducting magnets and the solution of the Kondo problem has benefited from his contributions. This volume contains a discriminating selection of the many topics on which Philip Anderson has worked. Some of the papers included are now hard to find elsewhere and each has been embellished with commentary on how they came to be written. Anderson has also provided an entertaining introduction setting out his philosophy of what is important in science.
