

Use the above class as a superclass to implement the following 3 subclasses:

<u>Class</u>	<u>Instance Fields</u>
IDCard	ID number
CallingCard	Card number, PIN
DriverLicense	Expiration year

- Write declarations for each of the subclasses. For each subclass, supply private instance variables. Leave the bodies of the constructors and the format methods blank for now.
- Code constructors for each of the three subclasses. Each constructor should call the superclass constructor to set the name. Here is one example:

```
public IDCard(String n, String id)
{
    super(n);
    idNumber = id;
}
```

- Replace the code of the format method for the three subclasses. The methods should produce a formatted description of the card details. The subclass methods should call the superclass format method to get the formatted name of the cardholder then add the additional formatted instance fields. Here is an example for IDCard:

Mendelsohn, 1998-12-31 That concern about human genetics is at the top of many lists of issues requiring intense discussion from scientific political social and ethical points of view is today no surprise It was in the spirit of attempting to establish the basis for intelligent discussion of the issues involved that a group of us gathered at a meeting of the International Society for the History Philosophy and Social Studies of Biology in the Summer of 1995 at Brandeis University and began an exploration of these questions in earlier versions of the papers presented here Our aim was to cross disciplines and jump national boundaries to be catholic in the methods and approaches taken and to bring before readers interested in the emerging issues of human genetics well reasoned informative and provocative papers The initial conference and elements of the editorial work which have followed were generously supported by the Stifterverband für die Deutsche Wissenschaft We thank Professor Peter Weingart of Bielefeld University for his assistance in gaining this support As Editors we thank the anonymous readers who commented upon and critiqued many of the papers and in turn made each paper a more valuable contribution We also thank the authors for their understanding and patience Michael Fortnn Everett Mendelsohn Cambridge MA September 1998 vii INTRODUCTION In 1986 the annual symposium at the venerable Cold Spring Harbor laboratories was devoted to the Molecular Biology of Homo sapiens Screening and Counseling for Genetic Conditions United States. Cell Cycle G.M. Padilla, 2012-12-02 Genetic Expression in the Cell Cycle provides an understanding of the molecular mechanisms that govern the expression of genetic information during the cell cycle The initial five chapters describe the intimate relationships between the supramolecular complexes that form the basic structure of chromatin Emphasis is placed on the dynamics of cycle dependent changes in the structural organization of some of these components Subsequent chapters demonstrate that small nuclear RNAs SnRNA are actively involved in gene regulation in eukaryotic cells discuss the relationship between cell cycle regulation in the yeast *Saccharomyces cerevisiae* and transcription of ribosomal RNA genes and describe the use of conditional lethal mutants to study the regulation of the cell cycle of eukaryotic cells The remaining chapters discuss the concepts and methodologies employed to isolate and study specific cell cycle mutants of *S. cerevisiae* the antiproliferative effect of interferon on cultured human fibroblasts and the role of cell membrane and related subcellular elements in the control of proliferation differentiation and cell cycle kinetics *Genetic Analysis* Philip Mark Meneely, 2014 With its unique integration of genetics and molecular biology this text probes fascinating questions that explore how our understanding of key genetic phenomena can be used to understand biological systems Opening with a brief overview of key genetic principles model organisms and epigenetics the book goes on to explore the use of gene mutations the analysis of gene expression and activity a discussion of the genetic structure of natural populations and more *Energy and Water Development Appropriations for Fiscal Year 2001* United States. Congress. Senate. Committee on Appropriations. Lurquin, 2005 Drawing links between genetic and cultural development Cavalli Sforza developed groundbreaking techniques to trace the evolution of *Homo sapiens* and the origins of human differentiation in addition to his earlier work in bacterial genetics He is also the founder of the Human Genome Diversity Project and continues to work as the principal investigator at Stanford University's Human Population Genetics Laboratory Based on extensive research and
