Fostering Children's Mathematical Power Arthur J. Baroody,Ronald T. Coslick,1998-09-01 Teachers have the responsibility of helping all of their students construct the disposition and knowledge needed to live successfully in a complex and rapidly changing world To meet the challenges of the 21st century students will especially need mathematical power a positive disposition toward mathematics curiosity and self confidence facility with the processes of mathematical inquiry problem solving reasoning and communicating and well connected mathematical knowledge an understanding of mathematical concepts procedures and formulas This guide seeks to help teachers achieve the capability to foster children s mathematical power the ability to excite them about mathematics help them see that it makes sense and enable them to harness its might for solving everyday and extraordinary problems The investigative approach attempts to foster mathematical power by making mathematics instruction process based understandable or relevant to the everyday life of students Past efforts to reform mathematics instruction have focused on only one or two of these aims whereas the investigative approach accomplishes all three By teaching content in a purposeful context an inquiry based fashion and a meaningful manner this approach promotes chilren s mathematical learning in an interesting thought provoking and comprehensible way This teaching guide is designed to help teachers appreciate the need for the investigative approach and to provide practical advice on how to make this approach happen in the classroom It not only dispenses information but also serves as a catalyst for exploring conjecturing about discussing and contemplating the teaching and learning of mathematics

Being and Becoming in the Classroom Wolff-Mich Roth,2002-05-30 Highlights the current chasm between teacher education theories praxeologies and the actual experience of teaching praxis Many traditional teacher education programs emphasize teaching based on reflection and deliberation yet when a new teacher is in a unique situation there is not always

time to step back and look at it objectively Through Roth s extensive experience as a teacher he has learned that a teacher must live in the heat of the moment but also develop room to maneuver in the moment These skills come only by actually being in the classroom working at the elbow of experienced teachers and discussing the events of the day with other teachers Roth develops his theory by introducing the previously ignored element of temporality in teaching When there is no time out for reflection a teacher must develop on the spot decision making skills In part one he presents the ideas of being in the classroom with students and being with other teachers Other concepts that emerge are habitus perceptions and expectations that lead to action Spielraum room to maneuver in situations and relationality knowing how to act without reflection based on student teacher rapport In part two Roth asserts that when novice teachers coteach and engage in subsequent cogenerative dialoguing with seasoned professionals they are in the process of becoming in the classroom Teachers college students majoring in education and professors will all benefit immensely from this book
