- ☐ The gas particles inside it move faster, causing it to expand until it reaches at a new, larger size.
☐ The gas particles inside it move slower, causing it to contract until it reaches at a new, smaller size.
☐ The rate of nuclear fusion reactions inside it slows the nucleus.

Using that model of the balloon should not depend on size, the gas particles should still move faster. Thus, think about what would happen if the gas in the balloon were hot around the burner's flame, remembering that faster gas motion means higher temperature and that the burner jet is very sensitive to temperature.
