Time Changes of the Brownian Motion: Poincaré Inequality, Heat Kernel Estimate and Protodistance Jun Kigami, 2019-06-10. In this paper, time changes of the Brownian motions on generalized Sierpinski carpets including n -dimensional cube $[0, 1]^n$ are studied. Intuitively, time change corresponds to alteration to density of the medium where the heat flows. In case of the Brownian motion on $[0, 1]^n$, density of the medium is homogeneous and represented by the Lebesgue measure. The author's study includes densities which are singular to the homogeneous one. He establishes a rich class of measures called measures having weak exponential decay. This class contains measures which are singular to the homogeneous one such as Liouville measures on $[0, 1]^2$ and self-similar measures. The author shows the existence of time-changed process and associated jointly continuous heat kernel for this class of measures. Furthermore, he obtains diagonal lower and upper estimates of the heat kernel as time tends to 0. In particular, to express the principal part of the lower diagonal heat kernel estimate, he introduces protodistance associated with the density as a substitute of ordinary metric. If the density has the volume doubling property with respect to the Euclidean metric, the protodistance is shown to produce metrics under which upper off-diagonal sub-Gaussian heat kernel estimate and lower near-diagonal heat kernel estimate will be shown.

Domestication Gone Wild Heather Anne Swanson, Marianne Elisabeth Lien, Gro B. Ween, 2018-09-27 The domestication of plants and animals is central to the familiar and now outdated story of civilization s emergence Intertwined with colonialism and imperial expansion the domestication narrative has informed and justified dominant and often destructive practices Contending that domestication retains considerable value as an analytical tool the contributors to Domestication Gone Wild reengage the concept by highlighting sites and forms of domestication occurring in unexpected and marginal sites from Norwegian fjords and Philippine villages to British falconry cages and South African colonial townships Challenging idioms of animal husbandry as human mastery and progress the contributors push beyond the boundaries of farms fences and cages to explore how situated relations with animals and plants are linked to the politics of human difference and conversely how politics are intertwined with plant and animal life Ultimately this volume promotes a novel decolonizing concept of domestication that radically revises its Euro and anthropocentric narrative Contributors Inger Anneberg Natasha Fijn Rune Flikke Frida Hastrup Marianne Elisabeth Lien Knut G Nustad Sara Asu Schroer Heather Anne Swanson Anna Lowenhaupt Tsing Mette Vaarst Gro B Ween Jon Henrik Ziegler Remme
