

Electron Energy and Light

How does light reveal the behavior of electrons in an atom?

Why?

From fireworks to stars, the color of light is useful in finding out what's in matter. The emission of light by hydrogen and other atoms has played a key role in understanding the electronic structure of atoms. Trace materials, such as evidence from a crime scene, lead in paint or mercury in drinking water, can be identified by heating or burning the materials and examining the color(s) of light given off in the form of bright-line spectra.

Model 1 – White Light

- Trace the arrows in Model 1 and shade in the table with colored pencils where appropriate.
- What happens to white light when it passes through a prism?

The different wavelengths get separated

- Why are the color labels in the table in Model 1 plural (i.e., "Reds" rather than "Red")?

many different shades of a color in a range of wavelength

- Do all colors of light travel at the same speed?

Yes

- Do all colors of light have the same energy? If no, which colors have the highest energy and the least energy, respectively?

*All colors do not have the same energy. Blues + violets highest
Reds + oranges lowest*

- Consider the light illustrated in Model 1.

- Which color corresponds to the longest wavelengths?

Reds

- Which color corresponds to the shortest wavelengths?

Violets

- Write a sentence that describes the relationship between wavelength and energy of light.

As the wavelength gets shorter the energy of light increases

This book is the first of its kind devoted to the key role played by light and electromagnetic radiation in the universe Readers are introduced to philosophical hypotheses such as the economy symmetry and the universality of natural laws and are then guided to practical consequences such as the rules of geometrical optics and even Einstein's well known but mysterious relationship $E = mc^2$ Most chapters feature a pen picture of the life and character of a relevant scientific figure These

OCyHistorical InterludesOCO include among others Galileo's conflicts with the Inquisition Fourier's taunting of the guillotine Neils Bohr and World War II and the unique character of Richard Feynman The second edition has been revised and made more accessible to the general reader Whenever possible the mathematical material of the first edition has been replaced by appropriate text to give a verbal account of the mystery of the phenomenon of light and how its understanding has developed from pre historic to present times The emphasis is on reading for interest and enjoyment formulae or equations which underpin and reinforce the argument are presented in a form which does not interfere with the flow of the text The book will be of interest to students and teachers as well as general readers interested in physics
