Multidimensional Curriculum Enhancing Future Thinking Literacy Hava E. Vidergor, 2018-07-17 This book presents an innovative Multidimensional Curriculum Model MdCM that develops future thinking literacy among all ages and levels of school students. It combines theory and practice and is highly applicable for policy makers, curriculum coordinators, lecturers at colleges of education, graduate students and teachers who are challenged daily to provide meaningful and up to date learning. It will aid teachers to prepare learners for the fast changing world and equip them with skills that will help them control their futures. It combines latest teaching strategies of transdisciplinarity, phenomenon based, project based and problem based learning in a unique manner so as to develop 21st century skills. More specifically, it aims at developing higher order thinking skills and processes referred to as scientific, creative and future thinking. It covers core and non core curriculum domains, multi and transdisciplinary teaching as well as designing curricula for the gifted, the able and students at risk. It applies the latest theories on constructivism and carefully selected tools authentically and relevantly to create interest and challenge, addressing learning from personal, global and time perspectives. Each chapter highlights a strategy or thinking tool commencing with theory followed by a unit description and lesson plans. The chapters each end with a final product named the future scenario. This scenario, written by students projecting themselves into the future, is based on accumulated knowledge, summarizes their learning and illustrates future thinking literacy. **Molecular Imaging** Ralph Weissleder, 2010

The field of molecular imaging of living subjects has evolved considerably and has seen spectacular advances in chemistry, engineering and biomedical applications. This textbook was designed to fill the need for an authoritative source for this multidisciplinary field. We have been fortunate to recruit over 80 leading authors contributing 75 individual chapters. Given the multidisciplinary nature of the field, the book is broken into six different sections: Molecular Imaging technologies, Chemistry, Molecular Imaging in Cell and Molecular Biology, Applications of Molecular Imaging, Molecular Imaging in Drug Evaluation, with the final section comprised of chapters on computation, bioinformatics and modeling. The organization of this large amount of information is logical and strives to avoid redundancies among chapters. It encourages the use of figures to illustrate concepts and to provide numerous molecular imaging examples.
