**Blinding as a Solution to Bias** Christopher T. Robertson, Aaron S. Kesselheim, 2016-01-30  
 What information should jurors have during court proceedings to render a just decision? Should politicians know who is donating money to their campaigns? Will scientists draw biased conclusions about drug efficacy when they know more about the patient or study population? The potential for bias in decision making by physicians, lawyers, politicians, and scientists has been recognized for hundreds of years and drawn attention from media and scholars seeking to understand the role that conflicts of interests and other psychological processes play. However, commonly proposed solutions to biased decision making, such as transparency, disclosing conflicts, or exclusion, avoiding conflicts, do not directly solve the underlying problem of bias and may have unintended consequences. Robertson and Kesselheim bring together a renowned

group of interdisciplinary scholars to consider another way to reduce the risk of biased decision making blinding What are the advantages and limitations of blinding How can we quantify the biases in unblinded research Can we develop new ways to blind decision makers What are the ethical problems with withholding information from decision makers in the course of blinding How can blinding be adapted to legal and scientific procedures and in institutions not previously open to this approach Fundamentally these sorts of questions about who needs to know what open new doors of inquiry for the design of scientific research studies regulatory institutions and courts The volume surveys the theory practice and future of blinding drawing upon leading authors with a diverse range of methodologies and areas of expertise including forensic sciences medicine law philosophy economics psychology sociology and statistics Introduces readers to the primary policy issue this book seeks to address biased decision making Provides a focus on blinding as a solution to bias which has applicability in many domains Traces the development of blinding as a solution to bias and explores the different ways blinding has been employed Includes case studies to explore particular uses of blinding for statisticians radiologists and fingerprint examiners and whether the jurors and judges who rely upon them will value and understand blinding

**Forensic DNA Trace Evidence Interpretation** Duncan Taylor, Bas Kokshoorn, 2023-05-30 Forensic DNA Trace Evidence Interpretation Activity Level Propositions and Likelihood Ratios provides all foundational information required for a reader to understand the practice of evaluating forensic biology evidence given activity level propositions and to implement the practice into active casework within a forensic institution The

book begins by explaining basic concepts and foundational theory pulling together research and studies that have accumulated in forensic journal literature over the last 20 years The book explains the laws of probability showing how they can be used to derive from first principles the likelihood ratio used throughout the book to express the strength of evidence for any evaluation Concepts such as the hierarchy of propositions the difference between experts working in an investigative or evaluative mode and the practice of case assessment and interpretation are explained to provide the reader with a broad grounding in the topics that are important to understanding evaluation of evidence Activity level evaluations are discussed in relation to biological material transferred from one object to another the ability for biological material to persist on an item for a period of time or through an event the ability to recover the biological material from the object when sampled for forensic testing and the expectations of the prevalence of biological material on objects in our environment These concepts of transfer persistence prevalence and recovery are discussed in detail in addition to the factors that affect each of them The authors go on to explain the evaluation process how to structure case information and formulate propositions This includes how a likelihood ratio formula can be derived to evaluate the forensic findings introducing Bayesian networks and explaining what they represent and how they can be used in evaluations and showing how evaluation can be tested for robustness Using these tools the authors also demonstrate the ways that the methods used in activity level evaluations are applied to questions about body fluids There are also chapters dedicated to reporting of results and implementation of activity level evaluation in a working forensic laboratory Throughout the book four cases are used as examples to demonstrate how to relate the theory to practice and detail how laboratories can integrate and implement activity level evaluation into their active casework
