

The Basic Outline of a Paper

The following outline shows a basic format for most academic papers. No matter what length the paper needs to be, it should still follow the format of having an introduction, body, and conclusion. Read over what typically goes in each section of the paper. Use the back of this handout to outline information for your specific paper.

I. Introduction

The introduction should have **some** of the following elements, depending on the type of paper:

- Start with an attention grabber: a short story, example, statistic, or historical context that introduces the paper topic
- Give an overview of any issues involved with the subject
- Define of any key terminology need to understand the topic
- Quote or paraphrase sources revealing the controversial nature of the subject (argumentative papers only)
- Highlight background information on the topic needed to understand the direction of the paper
- Write an antithesis paragraph, presenting the primary opposing views (argumentative paper only)

The introduction must end with a **THESIS** statement (a 1 to 2 sentences in length):

- Tell what the overall paper will focus on
- Briefly outline the main points in the paper

II. Body

- Clearly present the main points of the paper as listed in the thesis
- Give strong examples, details, and explanations to support each main points
- If an argumentative paper, address any counterarguments and refute those arguments
- If a research paper, use strong evidence from sources—paraphrases, summaries, and quotations that support the main points

III. Conclusion

- Restate your thesis from the introduction in different words
- Briefly summarize each main point found in the body of the paper (avoid going over 2 sentences for each point)
- Give a statement of the consequences of not embracing the position (argumentative paper only)
- End with a strong clincher statement: an appropriate, meaningful final sentence that ties the whole point of the paper together (may refer back to the attention grabber)

Additional Tips

- ✓ Decide on the thesis and main points first
- ✓ You do not need to start writing your paper with the introduction
- ✓ Try writing the thesis and body first; then go back and figure out how to best introduce the body and conclude the paper
- ✓ Use transitions between main points and between examples within the main points
- ✓ Always keep your thesis in the forefront of your mind while writing; everything in your paper must point back to the thesis
- ✓ Use the back of this handout to make an outline of your paper

Learning by Effective Utilization of Technologies: Facilitating Intercultural Understanding R. Mizoguchi, P. Dillenbourg, Z. Zhu, 2006-11-15 A major theme of this book is the use of computers for supporting collaborative learning This is not surprising since computer supported collaborative learning has become both a widespread educational practice and a main domain of research Moreover collaborative learning has deep roots in Asian educational traditions Given the large number of researchers within this field its scope has become very broad Under this umbrella one finds a variety of more specific topics such as interaction analysis collaboration scripts e g the Jigsaw script communities of practice sociocognitive conflict resolution cognitive apprenticeship various tools for argumentation online discussion or collaborative drawing tools whiteboards collaborative writing and the role of facilitators Most research work on collaborative learning focuses on interactions rather than on the contents of environments which had been the focus in the previous decades of learning technology research However there is no reason to focus on one aspect to the detriment of the other The editors are pleased that the selected papers also cover multiple issues related to the storage representation and retrieval of knowledge ontologies for learning environments and the semantic web knowledge bases and data mining meta data and content management systems and so forth This publication also reveals a growing interest for non verbal educational material namely

pictures and video materials which are already central to new popular web based applications This book includes contributions that bridge both research tracks the one focusing on interactions and the other on contents the pedagogical use of digital portfolios both for promoting individual reflections and for scaffolding group interactions **International Symposium on World Ecological Design** F. Ying,L.C. Jain,R. Wan,2024-04-23 With the world facing increasingly serious global climate change and resource scarcity issues ecology and the environment have received much attention in recent years As a major factor in human activity design plays an important part in protecting the environment as does the role of digital technology in finding solutions to the pressing problems faced in this regard This book presents the proceedings of ISWED2023 the International Symposium on World Ecological Design held on 17 December 2023 in Guangzhou China Sponsored by the World Eco Design Conference a UN Consultative NGO the conference provides a platform for professionals and researchers from industry and academia to present and discuss recent advances in the field of ecological design This year the conference focused on the four topics of digital technology and health digital technology and transportation digital technology and energy and digital technology and the environment A total of 518 submissions on these topics were received for the conference of which 125 were accepted for presentation and publication here Providing a current overview of research and innovation in ecological design around the world the book will be of interest to all those working in the fields of ecological design and digital technology integration **Real-Time Simulation Technologies: Principles,**

Methodologies, and Applications Katalin Popovici,Pieter J. Mosterman,2017-12-19 Real Time Simulation Technologies Principles Methodologies and Applications is an edited compilation of work that explores fundamental concepts and basic techniques of real time simulation for complex and diverse systems across a broad spectrum Useful for both new entrants and experienced experts in the field this book integrates coverage of detailed theory acclaimed methodological approaches entrenched technologies and high value applications of real time simulation all from the unique perspectives of renowned international contributors Because it offers an accurate and otherwise unattainable assessment of how a system will behave over a particular time frame real time simulation is increasingly critical to the optimization of dynamic processes and adaptive systems in a variety of enterprises These range in scope from the maintenance of the national power grid to space exploration to the development of virtual reality programs and cyber physical systems This book outlines how for these and other undertakings engineers must assimilate real time data with computational tools for rapid decision making under uncertainty Clarifying the central concepts behind real time simulation tools and techniques this one of a kind resource Discusses the state of the art important challenges and high impact developments in simulation technologies Provides a basis for the study of real time simulation as a fundamental and foundational technology Helps readers develop and refine principles that are applicable across a wide variety of application domains As science moves toward more advanced technologies unconventional design approaches and unproven regions of the design space simulation tools are increasingly

critical to successful design and operation of technical systems in a growing number of application domains This must have resource presents detailed coverage of real time simulation for system design parallel and distributed simulations industry tools and a large set of applications **Editorial Research Reports** ,1928 **Resources in Education** ,1998 **System Engineering Management** Benjamin S.
