

Solving Equations

Writing & solving equations can help us answer questions about situations.

Suppose a scientist has 13.68 liters of acid and needs 16.05 liters for an experiment. How many more liters of acid does she need for the experiment?

We can represent this situation with the equation:

$$13.68 + x = 16.05$$

The solution can be found by subtracting 13.68 from each side. This gives us some new equations that also represent the situation:

$$x = 16.05 - 13.68$$

$$x = 2.37$$

The solution is 2.37 liters.

Let's say a food pantry takes a 54-pound bag of rice and splits it into portions that each weigh $\frac{3}{4}$ of a pound. How many portions can they make from this bag?

We can represent this situation with the equation:

$$\frac{3}{4}x = 54$$

We can find the value of x by dividing each side by $\frac{3}{4}$. This gives us some new equations that represent the same situation:

$$x = 54 \div \frac{3}{4}$$

$$x = 72$$

The solution is 72 portions.

Mathematical Heat Transfer and Fluid Flow Models in Engineering and Medicine Abram S. Dorfman, 2016-11-28 Applications of mathematical heat transfer and fluid flow models in engineering and medicine Abram S Dorfman University of Michigan USA Engineering and medical applications of cutting edge heat and flow models This book presents innovative efficient methods in fluid flow and heat transfer developed and widely used over the last fifty years The analysis is focused on mathematical models which are an essential part of any research effort as they demonstrate the validity of the results obtained The universality of mathematics allows consideration of engineering and biological problems from one point of view using similar models In this book the current situation of applications of modern mathematical models is outlined in three parts Part I offers in depth coverage of the applications of contemporary conjugate heat transfer models in various industrial and technological processes from aerospace and nuclear reactors to drying and food processing In Part II the theory and application of two recently developed models in fluid flow are considered the similar conjugate model for simulation of biological systems including flows in human organs and applications of the latest developments in turbulence simulation by direct solution of Navier Stokes equations including flows around aircraft Part III proposes fundamentals of laminar and

turbulent flows and applied mathematics methods The discussion is complimented by 365 examples selected from a list of 448 cited papers 239 exercises and 136 commentaries Key features Peristaltic flows in normal and pathologic human organs Modeling flows around aircraft at high Reynolds numbers Special mathematical exercises allow the reader to complete expressions derivation following directions from the text Procedure for preliminary choice between conjugate and common simple methods for particular problem solutions Criteria of conjugation definition of semi conjugate solutions This book is an ideal reference for graduate and post graduate students and engineers

Mathematics in Middle and Secondary School Alexander Karp,Nicholas Wasserman,2014-11-01 The experience and knowledge acquired in teacher education courses should build important fundamentals for the future teaching of mathematics In particular experience in mathematical problem solving and in planning lessons devoted to problem solving is an essential component of teacher preparation This book develops a problem solving approach and is intended to be a text used in mathematics education courses or professional development for pre service or in service middle and secondary school teachers It can be used both in graduate and undergraduate courses in accordance with the focus of teacher preparation programs The content of the book is suited especially for those students who are further along in their mathematics education preparation as the text is more involved with mathematical ideas and problem solving and discusses some of the intricate pedagogical considerations that arise in teaching The text is written not as an introduction to mathematics education a first course but rather as a second or probably third course The book deals both with general methodology issues in mathematics education incorporating a problem solving approach Chapters 1 6 and with more concrete applications within the context of specific topics algebra geometry and discrete mathematics Chapters 7 13 The book provides opportunities for teachers to engage in authentic mathematical thinking The mathematical ideas under consideration build on specific middle and secondary school content while simultaneously pushing the teacher to consider more advanced topics as well as various connections across mathematical domains The book strives to preserve the spirit of discussion and at times even argument typical of collaborative work on a lesson plan Based on the accumulated experience of work with future and current teachers the book assumes that students have some background in lesson planning and extends their thinking further Specifically this book aims to provide a discussion of how a lesson plan is constructed including the ways in which problems are selected or invented rather than the compilation of prepared lesson plans This approach reflects the authors view that the process of searching for an answer is often more important than the formal result
