## **General Intelligence Books:**

Artificial General Intelligence Ben Goertzel, Cassio Pennachin, 2007-01-17 Only a small community has concentrated on general intelligence. No one has tried to make a thinking machine. The bottom line is that we really haven't progressed too far toward a truly intelligent machine. We have collections of dumb specialists in small domains; the true majesty of general intelligence still awaits our attack. We have got to get back to the deepest questions of AI and general intelligence. Marvin Minsky as interviewed in *Hal's Legacy* edited by David Stork, 2000. Our goal in creating this edited volume has been to fill an apparent gap in the scientific literature by providing a coherent presentation of a body of contemporary research that in spite of its integral importance has hitherto kept a very low profile within the scientific and intellectual community. This body of work has not been given a name before; in this book we christen it Artificial General Intelligence (AGI). What distinguishes AGI work from run-of-the-mill artificial intelligence research is that it is explicitly focused on engineering general intelligence in the short term. We have been active researchers in the AGI field for many years and it has been a pleasure to gather together papers from our colleagues working on related ideas from their own perspectives. In the Introduction we give a conceptual overview of the AGI field and also summarize and interrelate the key ideas of the papers in the subsequent chapters.

**General Intelligence Test & Mental Ability Test** Rph Editorial Board, 2020-10 The examinations of the present era are becoming tough nuts to crack with the rise of every sun on the academic horizon of the world. The tests related to General Mental Ability have also received greater attention of paper setters. Thus these tests would be more difficult in test session commencing from 2002 AD. We at RPH decided to give an edge to the candidates such examinations. We worked hard for more than a year on the manuscript of this volume. What finally turned out to be was a systematic and neatly planned compendium exclusively dedicated to general mental ability tests. Students preparing for entrance test and competitive examination of MBA, CDS, NDA, CAT, MAT, CMAT, RRB, SCRA, SBIPO, SSC EXAMS, UPSC, GMAT, GINDOMAT, IBPSC, WE B Ed etc would find it to be a boon for themselves. This systematic study and practice will help them succeed in their examinations. On behalf of publishers we wish you all the best for your forthcoming examinations.

**The Scientific Study of General Intelligence** Helmuth Nyborg, 2003-07-11 This book celebrates two triumphs in modern psychology: the successful development and application of a solid measure of general intelligence and the personal courage and skills of the man who made this possible: Arthur R. Jensen from Berkeley University. The volume traces the history of intelligence from the early 19th century approaches to the most recent analyses of the hierarchical structure of cognitive abilities and documents the transition from a hopelessly confused concept of intelligence to the development of an objective measure of psychometric *g*. The contributions illustrate the impressive power *g* has with respect to predicting educational achievement, getting an attractive job, or social stratification. The book is divided into six parts as follows: Part I presents the most recent higher

stream analysis of cognitive abilities Part II deals with biological aspects of g such as research on brain imaging glucose uptake working memory reaction time inspection time and other biological correlates and concludes with the latest findings in g related molecular genetics Part III addresses demographic aspects of g such as geographic race and sex differences and introduces differential psychological aspects as well Part IV concentrates on the g nexus and relates such highly diverse topics as sociology genius retardation training education jobs and crime to g Part V contains chapters critical of research on g and its genetic relationship and also presents a rejoinder Part VI looks at one of the greatest contemporary psychologists Professor Emeritus Arthur R Jensen as teacher and mentor

**The Presbyterian Treasury of Education, Religion and General Intelligence ...**, 1848      Artificial General Intelligence Julian Togelius, 2024-09-24 How to make AI capable of general intelligence and what such technology would mean for society Artificial intelligence surrounds us More and more of the systems and services you interact with every day are based on AI technology Although some very recent AI systems are generalists to a degree most AI is narrowly specific that is it can only do a single thing in a single context For example your spellchecker can't do mathematics and the world's best chess playing program can't play Tetris Human intelligence is different We can solve a variety of tasks including those we have not seen before In Artificial General Intelligence Julian Togelius explores technical approaches to developing more general artificial intelligence and asks what general AI would mean for human civilization Togelius starts by giving examples of narrow AI that have superhuman performance in some way Interestingly there have been AI systems that are superhuman in some sense for more than half a century He then discusses what it would mean to have general intelligence by looking at definitions from psychology ethology and computer science Next he explores the two main families of technical approaches to developing more general artificial intelligence foundation models through self supervised learning and open ended learning in virtual environments The final chapters of the book investigate potential artificial general intelligence beyond the strictly technical aspects The questions discussed here investigate whether such general AI would be conscious whether it would pose a risk to humanity and how it might alter society

*Theoretical Foundations of Artificial General Intelligence* Pei Wang, Ben Goertzel, 2012-08-31 This book is a collection of writings by active researchers in the field of Artificial General Intelligence on topics of central importance in the field Each chapter focuses on one theoretical problem proposes a novel solution and is written in sufficiently non technical language to be understandable by advanced undergraduates or scientists in allied fields This book is the very first collection in the field of Artificial General Intelligence AGI focusing on theoretical conceptual and

philosophical issues in the creation of thinking machines All the authors are researchers actively developing AGI projects thus distinguishing the book from much of the theoretical cognitive science and AI literature which is generally quite divorced from practical AGI system building issues And the discussions are presented in a way that makes the problems and proposed solutions understandable to a wide readership of non specialists providing a distinction from the journal and conference proceedings literature The book will benefit AGI researchers and students by giving them a solid orientation in the conceptual foundations of the field which is not currently available anywhere and it would benefit researchers in allied fields by giving them a high level view of the current state of thinking in the AGI field Furthermore by addressing key topics in the field in a coherent way the collection as a whole may play an important role in guiding future research in both theoretical and practical AGI and in linking AGI research with work in allied disciplines
