**Volatile Compounds and Smell Chemicals (Odor and Aroma) of Food** Eugenio Aprea,2021-04-29 Among the constituents of food volatile compounds are a particularly intriguing group of molecules because they give rise to odor and aroma Indeed olfaction is one of the main aspects influencing the appreciation or dislike of particular food items Volatile compounds are perceived through the smell sensory organs of the nasal cavity and evoke numerous associations and emotions even before the food is tasted Such a reaction occurs because the information from these receptors is directed to the hippocampus and amygdala and the key regions of the brain involved in learning and memory In addition to identifying the odor active compounds the analysis of the volatile compounds in food is also applicable for detecting the ripening senescence and decay in fruit and vegetables as well as monitoring and controlling the changes during food processing and storage i.e preservation fermentation cooking and packaging I warmly invite colleagues to submit their original research or review articles covering all aspects of volatile compounds research in the food sector excluding
