Bacteriophages Pilar García Suárez, Lucía Fernández, 2020-11-24 There is talk of an upcoming antibiotic armageddon with untreatable post operative infections and similarly untreatable complications after chemotherapy Indeed the now famous O'Neill Report <https://amr-review.org> suggests that by 2050 more people might die from antibiotic resistant bacterial infections than from cancer While we are still learning all the subtle drivers of antibiotic resistance it seems increasingly clear that we need to take a one health approach curtailing the use of antibiotics in both human and veterinary medicine However there are no new classes of antibiotics on our horizon Maybe something that has been around forever can come to our rescue bacteriophages Nevertheless it is also necessary to do things differently and use these new antimicrobials appropriately Therefore an in depth study of bacteriophage biology and case by case applications might be required Whilst by no means comprehensive this book does cover some of the many topics related to bacteriophages as antimicrobials including their use in human therapy and aquaculture It also explores the potential use of phage endolysins as substitutes of antibiotics in two sectors where there is an urgent need human therapy and the agro food industry Last but not least there is an excellent perspective article on phage therapy implementation

Woldringh, Arie Zaritsky, 2019-11-14

The 1st volume of our Research Topic *The Bacterial Cell Coupling between Growth Nucleoid Replication Cell Division and Shape* was published as an eBook in May 2016 see <http://journal.frontiersin.org/researchtopic/2905> the bacterial cell coupling between growth nucleoid replication cell division and shape As a sign of growing interest to the topic two workshops followed the same year Stochasticity in the Cell Cycle in Jerusalem Israel by the Hebrew University's Institute of Advanced Studies and EMBO's Cell Size Regulation in Joachimsthal Germany From the time of launching the first edition several new groups have entered the field and many established groups have made significant advances using state of the art microscopy and microfluidics Combining these approaches with the techniques pioneered by quantitative microbiologists decades ago these approaches have provided remarkable amounts of numerical data Most of these data needed yet to be put into a broader theoretical perspective Moreover the molecular mechanisms governing coordination and progression of the main bacterial cell cycle processes have remained largely unknown These outstanding fundamental questions and the growing interest to the field motivated us to launch the next volume titled *The Bacterial Cell Coupling between Growth Nucleoid Replication Cell Division and Shape Volume 2* shortly after completion of the first edition in October 2016 The issue contains 17 contributions from a diverse array of scientists whose field of study spans microbiology biochemistry genetics experimental and theoretical biophysics The specific questions addressed in the issue include What triggers initiation of chromosome replication How is cell division coordinated with replication both spatially and temporally How is cell size controlled and linked to the rate of mass growth What role plays physical organization of the chromosomes in their segregation and in regulation of cell division The publications covering these questions are divided into three topical areas 1 Cell Cycle Regulation 2 Growth and Division and 3 Nucleoid Structure and Replication New ideas and techniques put forward in these articles bring us closer to understand these fundamental cellular processes but the quest to resolve them is far from being complete Plans for the next edition are under way along with further meetings and workshops e.g. an EMBO Workshop on Bacterial cell biophysics DNA replication growth division size and shape in Ein Gedi Israel May 2020 We hope that via such interdisciplinary exchange of ideas we will come closer to answering the above mentioned complex and multifaceted questions Therapeutic RNA Nanotechnology Kirill A. Afonin, Morgan Chandler, 2021-07-21 This collection of research articles and reviews covers the latest work in the design delivery dynamic abilities and immune stimulation of RNA nanoparticles which have driven the utilization of their immunomodulatory properties The unknown immune properties of nucleic acid nanoparticles have been a major hurdle in their adaptation until the works herein began assessing their structure activity relationships This collection chronologically follows the path of investigating the recognition of design components to implementing them into nucleic

acid nanostructures RNA nanotechnology is an emerging platform for therapeutics with increasing clinical relevance as this approach becomes more widely used and approved for the treatment of various diseases The latest research aims to take advantage of RNA s modular nature for the design of nanostructures which can interact with their environments to communicate programmed messages with intracellular pathways In doing so nanoparticles can be used to elicit or elude responses by the immune system as desired in conjunction with their therapeutic applications **Chemistry and Water** Satinder Ahuja,2016-11-23 After air water is the most crucial resource for human survival To achieve water sustainability we will have to deal with its scarcity and quality and find ways to reclaim it from various sources Chemistry and Water The Science Behind Sustaining the World s Most Crucial Resource applies contemporary and sophisticated separation science and chromatographic methods to address the pressing worldwide concerns of potable water for drinking and safe water for irrigation to raise food for communities around the world Edited and authored by world leading analytical chemists the book presents the latest research and solutions on topics including water quality and pollution water treatment technologies and practices watershed management water quality and food production challenges to achieving sustainable water supplies water reclamation techniques and wastewater reuse Explores the role water plays to assure our survival and maintain life Provides valuable information from world leaders in chemistry and water research Addresses water challenges and solutions globally to ensure sustainability *Exercises for the Microbiology Laboratory, Fifth Edition* Michael J Leboffe,Burton E Pierce,2021-01-01 This inexpensive exercise manual provides a straightforward step by step concise alternative to large microbiology laboratory manuals It can be used by itself as a required lab text and is also designed to be used in conjunction with A Photographic Atlas for the Microbiology Laboratory Fifth Edition by Leboffe Pierce with exercises keyed to specific images
