

Question 4: Genetic Algorithm: Evolve Fitter Candidate Solution

Suppose a genetic algorithm uses chromosomes of the form $X = abcdefgh$ with a fixed length of eight genes. Each gene can be any digit between 0 and 9. Let the fitness of individual x be calculated as:

$$f(x) = (a + b) + (c + d) + (e + f) - (g + h)$$

and let the initial population consist of four individuals with the following chromosomes:

$$X_1 = 65413532$$

$$X_2 = 87126601$$

$$X_3 = 23921285$$

$$X_4 = 41852094$$

Improve the total fitness using Genetic algorithm process. Show your work.

That Is Interesting!: John Holland, 85 Years Young* Jan Wouter Vasbinder,2014-09-12 John Holland is one of the few scientists who all by themselves and by their pursuits helped change the course of science and the wealth of human knowledge There is hardly a field of science or problems that is not affected by John s work on complexity and in particular complex adaptive systems On the occasion of his 85th birthday many of his friends wrote about John about facets of this remarkable man that only people close to him can know and tell This book collects those stories highlighting aspects of the creation of complexity science that will most likely not be found in the books on John s works The stories and anecdotes about his quests his collaborators and his friends show his incredible mind his boyish curiosity and explorative energy his philosophy of life his enormous hospitality and natural inclination to make friends Published in collaboration with Institute Para Limes *An Essay Concerning Sociocultural Evolution* Jürgen Klüver,2013-04-17 Writing about sociocultural evolution is always a complicated enterprise because the subject is not only difficult in a scientific way but also in a political one In particular since the events of September 11 2001

the debates about the differences between cultures and their evolutionary developments have left the fields of pure scientific research once and for all. However, there have probably never been scientific discourses that did not touch the realms of political discussions. Darwin, Marx, the atomic physicists and the recent debates about genetic engineering are just a few examples. The aim of this book is not to take part in these debates but it is written as a contribution to the foundations of evolutionary theories in the social sciences. The readers will have to judge if I have succeeded with it. Perhaps essays like this one will help to clarify the problems we all have to face just now in regard to intercultural discourses. Theoretically and mathematically grounded insights into cultural development as the source of many political problems will not solve to how to deal with them immediately but may serve as signposts in the long run.

Digital English as a Lingua Franca Annarita Taronna, 2023-01-10. Today the Internet has become a prime venue for social interaction through online services where people share aspects of their daily lives, talk about their interests with other like-minded people and express their opinions without formality or constraint. Against this background, this book investigates the aesthetics of informal text-based computer-mediated communication (CMC) such as question and answer websites conceived of as a distinctive medium of communication based on cosmopolitan brand communities that share the same field of expertise and a common interest in a particular topic. By adopting sentiment analysis in order to recognize the positive or negative semantic orientation of texts and their emotional style, the book demonstrates that the aesthetics of such informal texts written using Digital English as a Lingua Franca (DELf) is influenced by how we associate emotions and opinions with certain linguistic aspects such as specific words or syntactic patterns and how we can classify linguistic expressions according to the type of opinion that they convey.
