

## Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- [ ] circles are females and squares are males.
- [ ] is shaded = affected = square indicates that a person has the trait.

The pedigree seen below is the inheritance of a trait. Shaded individuals are affected. First, determine the probable genotype of person 1 = 11. Then answer the questions below the table.

What do you know about the genotype of the mother of 1?

These people (11) had an affected son (12). His dad is unaffected, but affected when he is mated. Since the mother is not shaded, she must be a carrier.

Number 11 is unaffected just like her father. Where could she get her allele for color blindness?

She inherited her allele for color blindness from her mother. Must have been a carrier. If unaffected, from her father.

Number number 11 and 2 were mated. How many have color blindness (12)?

Two children with color blindness for color blindness.

What must be the genotype of the parents of a color-blind daughter? Explain.

To have a color-blind daughter, she must have the affected allele from each parent. Her father must be X<sup>A</sup>Y and mother must have to be X<sup>A</sup>X<sup>A</sup>.

If number 11 mated a normal man, what is the probability that their kids will be colorblind?

$X^N X^N \times X^N Y \rightarrow$  all of their kids will not be color blind.

(11) (normal male)
