

Pedigree F

2. Answer the following for this pedigree G:

- What is the most likely mode of inheritance of the trait?
- Give two reasons for your answer in part (a).
- If the parents of the persons numbered 1 and 2 have another child, what is the probability that child will be affected?
- What is the probability that the first child of a mating between the person numbered 1 and an unaffected female with no family history of the disease (and who we thus assume does not carry the disease allele) will be affected?
- What is the probability that the first child of a mating between the person numbered 2 and a heterozygous male will be affected?
- The mode of inheritance of hemochromatosis is quite common. But there is still something unusual about the appearance of this trait in this family. What is it?
