

Lab Report Writing Guideline:

The objective of lab reports is for you to gather your results/ thoughts and communicate that information to others. Hence, you should treat it like writing a scientific research paper and format as follows: Title (cover page), Abstract, Introduction, Materials and Method, Results, Discussion, and References. All the sections are labeled except the title and abstract.

TITLE:

A short phrase that summarizes what is in the report. The title along with your name, PID, TA's name, section number, group number, and the name of your group members goes on a cover page.

ABSTRACT: (no more than 0.5 page single spaced)

The abstract is a short summary of your experiment and is designed to convey the important points of your work to other scientists. Therefore, this section should include the objective of your experiment, method used to achieve that goal, results obtained (critical ones), and major conclusions reached.

INTRODUCTION:

The introduction gives the necessary background information to understand the relevance of your experiment and interpretation of your results. Potential ideas to write about could include what is known about the topic, question being asked, and experimental approach to answering this question (overall experimental design and not an extensive explanation of each method works). Include all materials mentioned in the specific lab report guidelines. You should also properly cite all sources used in the introduction (no footnoting).

MATERIALS AND METHODS:

Briefly summarize the procedure used to complete your experiment using appropriate subheadings. Don't copy the lab manual or list all the materials used in your experiments. You can cite the lab manual but remember to mention any changes you made that are different from the lab manual.

RESULTS:

This section contains the data gathered from all of your experiments. You should not, however, interpret or analyze the meaning of the results in this section (that goes in the discussion section).

- Organize into sections with subheading – usually the same as the Material and Methods section.
