Cullen, 2012-09-20 Undergraduate level introduction to linear algebra and matrix theory Explores matrices and linear systems vector spaces determinants spectral decomposition Jordan canonical form much more Over 375 problems Selected answers 1972 edition **The Theory and Practice of Conformal Geometry** Steven G. Krantz, 2016-03-17 In this original text prolific mathematics author Steven G Krantz addresses conformal geometry a subject that has occupied him for four decades and for which he helped to develop some of the modern theory This book takes readers with a basic grounding in complex variable theory to the forefront of some of the current approaches to the topic Along the way the author notes in his Preface the reader will be exposed to some beautiful function theory and also some of the rudiments of geometry and analysis that make this subject so vibrant and lively More up to date and accessible to advanced undergraduates than most of the other books available in this specific field the treatment discusses the history of this active and popular branch of mathematics as well as recent developments Topics include the Riemann mapping theorem invariant metrics normal families automorphism groups the Schwarz lemma harmonic measure extremal length analytic capacity and invariant geometry A helpful Bibliography and Index complete the text [Optimization in Function Spaces](#) Amol Sasane, 2016-03-15 Classroom tested at the London School of Economics this original highly readable text offers numerous examples and exercises as well as detailed solutions Prerequisites are multivariable calculus and basic linear algebra 2015 edition [The Schwarz Lemma](#) Sean Dineen, 2016-04-21 Originally published Oxford Clarendon Press 1989 [Elementary Point-Set Topology](#) Andre L. Yandl, Adam Bowers, 2016-04-10 In addition to serving as an introduction to the basics of point set topology this text bridges the gap between the elementary calculus sequence and higher level mathematics courses The versatile original approach focuses on learning to read and write proofs rather than covering advanced topics Based on lecture notes that were developed over many years at The University of Seattle the treatment is geared toward undergraduate math majors and suitable for a variety of introductory courses Starting with elementary concepts in logic and basic techniques of proof writing the text defines topological and metric spaces and surveys continuity and homeomorphism Additional subjects include product spaces connectedness and compactness The final chapter illustrates topology's use in other branches of mathematics with proofs of the fundamental theorem of algebra and of Picard's existence theorem for differential equations This is a back to basics introductory text in point set topology that can double as a transition to proofs course The writing is very clear not too concise or too wordy Each section of the book ends with a large number of exercises The optional first chapter covers set theory and proof methods if the students already know this material you can start with Chapter 2 to present a straight

topology course otherwise the book can be used as an introduction to proofs course also Mathematical Association of America

**Matrices and Linear Algebra** Hans Schneider, George Phillip Barker, 2012-06-08 Linear algebra is one of the central disciplines in mathematics A student of pure mathematics must know linear algebra if he is to continue with modern algebra or functional analysis Much of the mathematics now taught to engineers and physicists requires it This well known and highly regarded text makes the subject accessible to undergraduates with little mathematical experience Written mainly for students in physics engineering economics and other fields outside mathematics the book gives the theory of matrices and applications to systems of linear equations as well as many related topics such as determinants eigenvalues and differential equations

Table of Contents 1 The Algebra of Matrices 2 Linear Equations 3 Vector Spaces 4 Determinants 5 Linear Transformations 6 Eigenvalues and Eigenvectors 7 Inner Product Spaces 8 Applications to Differential Equations For the second edition the authors added several exercises in each chapter and a brand new section in Chapter 7 The exercises which are both true false and multiple choice will enable the student to test his grasp of the definitions and theorems in the chapter The new section in Chapter 7 illustrates the geometric content of Sylvester's Theorem by means of conic sections and quadric surfaces 6 line drawings Index Two prefaces Answer section

*The Chinese Roots of Linear Algebra* Roger Hart, 2011-01-01 A monumental accomplishment in the history of non Western mathematics The Chinese Roots of Linear Algebra explains the fundamentally visual way Chinese mathematicians understood and solved mathematical problems It argues convincingly that what the West discovered in the sixteenth and seventeenth centuries had already been known to the Chinese for 1 000 years Accomplished historian and Chinese language scholar Roger Hart examines Nine Chapters of Mathematical Arts the classic ancient Chinese mathematics text and the arcane art of fangcheng one of the most significant branches of mathematics in Imperial China Practiced between the first and seventeenth centuries by anonymous and most likely illiterate adepts fangcheng involves manipulating counting rods on a counting board It is essentially equivalent to the solution of systems of  $N$  equations in  $N$  unknowns in modern algebra and its practice Hart reveals was visual and algorithmic Fangcheng practitioners viewed problems in two dimensions as an array of numbers across counting boards By cross multiplying these they derived solutions of systems of linear equations that are not found in ancient Greek or early European mathematics Doing so within a column equates to Gaussian elimination while the same operation among individual entries produces determinantal style solutions Mathematicians and historians of mathematics and science will find in The Chinese Roots of Linear Algebra new ways to conceptualize the intellectual development of linear algebra
