Romanowicz,Marzena Osuch,2015-06-29 This book presents the novel formulation and development of a Stochastic Flood Forecasting System using the Middle River Vistula basin in Poland as a case study The system has a modular structure including models describing the rainfall runoff and snow melt processes for tributary catchments and the transformation of a flood wave within the reach The sensitivity and uncertainty analysis of the elements of the study system are performed at both the calibration and verification stages The spatial and temporal variability of catchment land use and river flow regime based on analytical studies and measurements is presented A lumped parameter approximation to the distributed modelling of river flow is developed for the purpose of flow forecasting Control System based emulators Hammerstein Wiener models are applied to on line data assimilation Medium range probabilistic weather forecasts ECMWF and on line observations of temperature precipitation and water levels are used to prolong the forecast lead time The potential end users will also benefit from a description of social vulnerability to natural hazards in the study area Computational Hydraulics Ioana Popescu,2014-08-14 Computational Hydraulics

introduces the concept of modeling and the contribution of numerical methods and numerical analysis to modeling. It provides a concise and comprehensive description of the basic hydraulic principles and the problems addressed by these principles in the aquatic environment. Flow equations, numerical and analytical solutions are included. The necessary steps for building and applying numerical methods in hydraulics comprise the core of the book, and this is followed by a report of different example applications of computational hydraulics: river training effects on flood propagation, water quality modelling of lakes and coastal applications. The theory and exercises included in the book promote learning of concepts within academic environments. Sample codes are made available online for purchasers of the book. Computational Hydraulics is intended for under graduate and graduate students, researchers, members of governmental and non governmental agencies and professionals involved in management of the water related problems. Author: Ioana Popescu, Hydroinformatics group, UNESCO IHE Institute for Water Education, Delft, The Netherlands.

Hydrology and Hydrologic Modelling, P. V. Timbadiya, P. L. Patel, Vijay P. Singh, Priyank J. Sharma, 2023-05-01. This book comprises the proceedings of the 26th International Conference on Hydraulics, Water Resources and Coastal Engineering, HYDRO 2021, focusing on a broad spectrum of emerging opportunities and challenges in the field of hydrology and hydrological modelling. It covers a range of topics including but not limited to ground water modelling and management, integrated water resources and watershed management, surface water hydrology, drought assessment and mitigation, risk reliability and design of hydrologic system, etc. Presenting recent advances in the form of illustrations, tables and text, it offers readers insights for their own research. Impounded Water Bodies Modelling and Simulation, Salisu Dan'azumi, Supiah Shamsudin, 2014-05-02. This book enhances knowledge on Impounded Water Bodies (IWB) systems of the interested parties. They include academicians, scholars, scientists, researchers, engineers, undergraduate and postgraduate students. Specifically, this book is valuable for everyone involved in water hydrology, environment, civil engineering and other related disciplines. This book emphasized modelling and simulation of IWB, particularly Reservoir and Detention Pond, in relation to the two major hydrological problems: Flood and Water Pollution. The knowledge presented is useful for hydrological systems, real phenomenon replication and prediction. This book also provides IWB general overview in terms of the preliminary and state of the art analysis, which may trigger the interest for further research and investigations. The IWB related factors were integrated to provide the quantitative framework, alternative approaches and valuable outcomes that lead to worthy policy establishment. This book covers topics related to nutrient phosphorus loadings estimation using the new version of Event Based Stochastic Model in reservoir systems. The detention pond systems modelling using Analytical Probabilistic Models (APM) and the optimization of detention time using Particle Swarm Optimization (PSO) are elaborated. It is hoped that the book provides useful knowledge in pursuit of the IWB.
