Famished Rebecca J. Lester, 2019-11-19 When Rebecca Lester was eleven years old and again when she was eighteen she almost died from anorexia nervosa Now both a tenured professor in anthropology and a licensed social worker she turns her ethnographic and clinical gaze to the world of eating disorders their history diagnosis lived realities treatment and place in the American cultural imagination *Famished* the culmination of over two decades of anthropological and clinical work as well as a lifetime of lived experience presents a profound rethinking of eating disorders and how to treat them Through a mix of rich cultural analysis detailed therapeutic accounts and raw autobiographical reflections *Famished* helps make sense of why people develop eating disorders what the process of recovery is like and why treatments so often fail It is also an unsparing condemnation of the tension between profit and care in American healthcare demonstrating how a system set up to treat a disease may in fact perpetuate it Fierce and vulnerable critical and hopeful *Famished* will forever change the way you understand eating disorders and the people who suffer with them

Landscapes of Collectivity in the Life Sciences

Snait B. Gissis, Ehud Lamm, Ayelet Shavit, 2018-01-12 Broad perspective on collectivity in the life sciences from microorganisms to human consensus and the theoretical and empirical opportunities and challenges Many researchers and scholars in the life sciences have become increasingly critical of the traditional methodological focus on the individual This volume counters such methodological individualism by exploring recent and influential work in the life sciences that utilizes notions of collectivity sociality rich interactions and emergent phenomena as essential explanatory tools to handle numerous persistent scientific questions in the life sciences The contributors consider case studies of collectivity that range from microorganisms to human consensus discussing theoretical and empirical challenges and the innovative methods and solutions scientists have devised The contributors offer historical philosophical and biological perspectives on collectivity and describe collective phenomena seen in insects the immune system communication and human collectivity with examples ranging from cooperative transport in the longhorn crazy ant to the evolution of autobiographical memory They examine ways of explaining collectivity including case studies and modeling approaches and explore collectivity's explanatory power They present a comprehensive look at a specific case of collectivity the Holobiont notion the idea of a multi species collective a host and diverse microorganisms and the hologenome theory which posits that the holobiont and its hologenome are a unit of adaption The volume concludes with reflections on the work of the late physicist Eshel Ben Jacob pioneer in the study of collective phenomena in living systems Contributors Oren Bader John Beatty Dinah R Davison Daniel Dor Ofer Feinerman Raghavendra Gadagkar Scott F Gilbert Snait B Gissis Deborah M Gordon James Griesemer Zachariah I Grochau Wright Erik R Hanschen Eva Jablonka Mohit Kumar Jolly Anat Kolombus Ehud Lamm Herbert Levine Arnon Levy Xue Fei Li Elisabeth A Lloyd Yael Lubin Eva Maria Luef Ehud Meron Richard E Michod Samir Okasha Simone Pika Joan Roughgarden Eugene Rosenberg Ayelet Shavit Yael Silver Alfred I Tauber Ilana Zilber Rosenberg

Neuroanatomy for the XXIst Century

Kathleen S. Rockland, Javier DeFelipe, 2016-08-15 An explosion of new techniques with vastly improved visualization and sensitivity is leading a veritable revolution in modern neuroanatomy Basic questions related to cell types input localization and connectivity are being re visited and tackled with significantly more accurate and higher resolution experimental approaches A major goal of this e Book is thus to highlight in one place the impressive range of available techniques even as these are fast becoming routine This is not meant as a technical review however but rather will project the technical explosion as indicative of a field now in a vibrant state of renewal Thus contributions will be mainly research articles using the newer techniques A second goal is to showcase what has become the conspicuous interdisciplinary reach of the field neuroanatomical standards and the close association of structure function and underlying circuitry mechanisms are increasingly relevant to investigations in development physiology and disease Another feature of this Research Topic is that it includes a breadth of cross species contributions from investigators working with rodent nonhuman primate and human brains This is important since most of our current knowledge of brain structure has been obtained from experimental animals However recent technical advances coupled with researcher willingness to use the human tissue available will undoubtedly lead to major advances in the near future regarding human brain mapping and connectomes Thus of particular interest will be the methods that can help to define general wiring principles in the brain both structural and functional Overall the state of the field is exciting

Marine Polysaccharides Volume 2 Paola Laurienzo, 2018-04-24 This book is a printed edition of the Special Issue Marine Polysaccharides that was published in Marine Drugs

Salicylic Acid Signaling Networks Hua Lu, Jean Toby Greenberg, Loreto Holuigue, 2016-05-26 The small phenolic compound salicylic acid SA is critical for plant defense against a broad spectrum of pathogens SA is also involved in multi layered defense responses from pathogen associated molecular pattern triggered basal defense resistance gene mediated defense to systemic acquired resistance Recent decades have witnessed tremendous progress towards our understanding of SA mediated signaling networks Many genes have been identified to have direct or indirect effect on SA biosynthesis or to regulate SA accumulation Several SA receptors have been identified and characterization of these receptors has shed light on the mechanisms of SA mediated defense signaling which encompass chromosomal remodeling DNA repair epigenetics to transcriptional reprogramming Molecules from plant associated microbes have been identified which manipulate SA levels signaling SA does not act alone It engages in crosstalk with other signaling pathways such as those mediated by other phytohormones in an agonistic or antagonistic manner depending on hormones and pathosystems Besides affecting plant innate immunity SA has also been implicated in other cellular processes such as flowering time determination lipid metabolism circadian clock

control and abiotic stress responses possibly contributing to the regulation of plant development The multifaceted function of SA makes it critically important to further identify genes involved in SA signaling networks understand their modes of action and delineate interactions among the components of SA signaling networks In addition genetic manipulation of genes involved in SA signaling networks has also provided a promising approach to enhance disease resistance in economically important plants This ebook collects articles in the research topic Salicylic Acid Signaling Networks For this collection we solicited reviews perspectives and original research articles that highlight recent exciting progress on the understanding of molecular mechanisms underlying SA mediated defense SA crosstalk with other pathways and how microbes impact these events

Services In Global Value Chains: Manufacturing-related Services Patrick Low, Gloria O Pasadilla, 2016-06-21 This compilation of 22 firm specific case studies is an important contribution to the discussion of servicification trends in manufacturing Services have increased in importance and value in many manufacturing value chains making companies that produce physical products look more like service enterprises What services do global value chains use in their operations how important are they and how do economic policies shape firms configurations operations and location of global value chains This book addresses these questions and more The interviewed firms based in 12 APEC economies come from different sectors ranging from multinational automotive construction equipment and electrical appliance manufacturers to small and medium manufacturers of watches or chemical for water treatment The book analyses what specific services are important in different stages of the value chain and whether they are typically provided in house or outsourced

Gene Drives on the Horizon National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Life Sciences, Committee on Gene Drive Research in Non-Human Organisms: Recommendations for Responsible Conduct, 2016-07-28 Research on gene drive systems is rapidly advancing Many proposed applications of gene drive research aim to solve environmental and public health challenges including the reduction of poverty and the burden of vector borne diseases such as malaria and dengue which disproportionately impact low and middle income countries However due to their intrinsic qualities of rapid spread and irreversibility gene drive systems raise many questions with respect to their safety relative to public and environmental health Because gene drive systems are designed to alter the environments we share in ways that will be hard to anticipate and impossible to completely roll back questions about the ethics surrounding use of this research are complex and will require very careful exploration *Gene Drives on the Horizon* outlines the state of knowledge relative to the science ethics public engagement and risk assessment as they pertain to research directions of gene drive systems and governance of the research process This report

offers principles for responsible practices of gene drive research and related applications for use by investigators their institutions the research funders and regulators

Biopharmaceutical Processing Gunter Jagschies, Eva Lindskog, Karol Lacki, Parrish M. Galliher, 2018-01-18 Biopharmaceutical Processing Development Design and Implementation of Manufacturing Processes covers bioprocessing from cell line development to bulk drug substances The methods and strategies described are essential learning for every scientist engineer or manager in the biopharmaceutical and vaccines industry The integrity of the bioprocess ultimately determines the quality of the product in the biotherapeutics arena and this book covers every stage including all technologies related to downstream purification and upstream processing fields Economic considerations are included throughout with recommendations for lowering costs and improving efficiencies Designed for quick reference and easy accessibility of facts calculations and guidelines this book is an essential tool for industrial scientists and managers in the biopharmaceutical industry Offers a comprehensive go to reference for daily work decisions Covers both upstream and downstream processes Includes case studies that emphasize financial outcomes Presents summaries decision grids graphs and overviews for quick reference

Linguistic Influences on Mathematical Cognition Ann Dowker, Hans-Christoph Nuerk, 2017-06-16 For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing

Ballroom Biology: Recent Insights into Honey Bee Waggle Dance Communications Roger Schürch, Margaret J. Couvillon, Madeleine Beekman, 2016-03-02 The honey bee waggle dance communication is a complex unique at times controversial and ultimately fascinating behavior In an

elaborate figure of eight movement a returning forager conveys the distance and direction from the hive to resources usually the nectar and pollen that is their food and it remains one of the most sophisticated known forms of non human communication Not surprisingly since its discovery more than 60 years ago by Karl von Frisch the dance has been subject to investigations that span from basic biology through human culture and neurophysiology to landscape ecology Here we collate recent advances in our understanding of the dance

Biofuels: Greenhouse Gas Mitigation and Global Warming Ashwani Kumar,Shinjiro Ogita,Yuan-Yeu Yau,2018-02-09 This timely book is a compilation of edited articles by distinguished international scientists discussing global warming its causes as well as present and future solutions Social and economic growth at global level is measured in terms of GDP which requires energy inputs generally based on fossil fuel resources These however are major contributors to increasing levels of CO₂ causing 15 tonnes of green house gas emissions per capita Renewable sources of energy offer an alternative to fossil fuels and would help reduce this to the 2 tonnes of greenhouse gas emissions per capita per annum needed to achieve sustainable growth As such the book discusses the next generation of biofuels and all related aspects based on the editors significant investigations on biofuels over the last 30 years It also presents the latest research findings from research work carried out by contemporary researchers Presenting global biofuel perspectives it examines various issues related to sustainable development of biofuels in the contexts of agriculture forestry industry and economic growth It covers the 1st to 4th generation biofuels as well as the status of biofuel resources and their potential in carbon neutral economy Offering a comprehensive state of art overview of current and future biofuels at local and global levels this book appeals to administrators policy makers universities and research institutions

Theology, Science and Life Carmody Grey,2023-01-26 Offering a bold intervention in the ongoing debate about the relationship between theology and science Theology Science and Life proposes that the strong demarcation between the two spheres is unsustainable theology occurs within and not outside what we call science and science occurs within and not outside theology The book applies this in a penetrating way to the most topical contentious and philosophically charged science of late modernity biology Rejecting the easy dualism of expressions such as theology and science theology or science modern biology is examined so as to illuminate the nature of both In making this argument the book achieves two further things It is the first major English language reception and application of the thought of philosopher Hans Jonas in theology and it makes a decisive contribution to the unfolding reception of Radical Orthodoxy one of the most influential schools in contemporary Anglophone theology

Creolised Science Dorit Brixius,2024-04-04 This rich deeply researched study offers the first comprehensive exploration of cross cultural plant knowledge in eighteenth century Mauritius Using the concept of creolisation the process by which elements of different cultures are brought together to create entangled and evolving new entities Brixius examines the production of knowledge on an island without long established traditions of botany as understood by Europeans Once foreign plants and knowledge arrived in Mauritius they were adapted to new environmental

circumstances and a new socio cultural space Brixius explores how French colonists settlers mediators labourers and enslaved people experienced and shaped the island s botanical past centring the contributions of subaltern actors By foregrounding neglected non European actors from both Africa and Asia within a melting pot of cultivation traditions from around the world she presents a truly global history of botanical knowledge

Domains of Freedom Thembela Kepe,Melissa Levin,Bettina von Lieres,2016-09-12 After more than 20 years of freedom in South Africa we have to ask ourselves difficult questions are we willing to perpetuate a lie search for facts or think wishfully Freedom has been enabled by apartheid s end but at the same time some of apartheid s key institutions and social relations are reproduced under the guise of democracy This collection of essays acknowledges the enormous expectations placed on the shoulders of the South African revolution to produce an alternative political regime in response to apartheid and global neo liberalism It does not lament the inability of South Africa s democracy to provide deeper freedoms or suggest that since it hasn t this is some form of betrayal Freedom is made

possible and or limited by local political choices contemporary global conditions and the complexities of social change This book explores the multiplicity of spaces within which the dynamics of social change unfold and the complex ways in which power is produced and reproduced In this way it seeks to understand the often non linear practices through which alternative possibilities emerge the lengthy and often indirect ways in which new communities are imagined and new solidarities are built In this sense this book is not a collection of hope or despair Nor is it a book that seeks to situate itself between these two poles Instead it aims to read the present historically critically and politically and to offer insights into the ongoing iterative and often messy struggles for freedom

Improving Animal Welfare through Genetic Selection

Wendy Mercedes Rauw, 2016-07-12 In livestock species breeding goals are aimed primarily at improvement of production traits However there are a number of examples where selection for high production efficiency has resulted in reduced welfare through unfavorable outcomes in health and fitness characteristics These effects raise questions about what is ethically acceptable in animal breeding Welfare problems may be experienced when physiological balance is disturbed by genetic selection for high production alone by a mismatch between the environmental challenges and the range of coping responses available to an animal or from a mismatch between the animal's needs and their degree of satisfaction This may be resolved by either improving the environment to support the animal but also by providing the animal through genetic selection with means to adapt to the production environment The Standing Committee of the European Convention for the Protection of Animals kept for Farming Purposes emphasizes that breeding goals should include health and welfare The Farm Animal Welfare Council pleads for a greater emphasis in breeding programs on traits associated with good welfare However although breeding goals in most farm animal species have been broadened beyond production traits to include functional traits behavioral traits are rarely included despite their potential to improve animal production and welfare It is the goal of the present Research Topic to bring together experimental and theoretical research focusing on the genetics of welfare traits and the possibility to improve animal welfare through selection This topic presents an overview of the relationship between selection for high production and livestock robustness examples of improving robustness through the introduction of novel traits in livestock breeding and a discussion on selection methods to address welfare issues The discussion on sustainability of breeding practices is very alive today and will remain to be an important part of the debate in the future

Science, the State and the City Geoffrey Owen, Michael M. Hopkins, 2016 The book is about the link between science and business how discoveries made in academic laboratories are taken up by venture capitalists and investors and converted into products which if they are successful provide treatments for disease and may generate substantial returns for investors
