Typeset in the Future Dave Addey, 2018-12-11 A designer's deep dive into seven science fiction films filled with gloriously esoteric nerdery and observations as witty as they are keen. Wired In Typeset in the Future blogger and designer Dave Addey invites sci fi movie fans on a journey through seven genre defining classics discovering how they create compelling visions of the future through typography and design. The book delves deep into 2001 A Space Odyssey Star Trek The Motion Picture Alien Blade Runner Total Recall WALL E and Moon studying the design tricks and inspirations that make each film transcend mere celluloid and become a believable reality. These studies are illustrated by film stills concept art type specimens and ephemera plus original interviews with Mike Okuda Star Trek Paul Verhoeven Total Recall and Ralph Eggleston and Craig Foster Pixar. Typeset in the Future is an obsessively geeky study of how classic sci fi movies draw us in to their imagined worlds.

Screening Big Data Gerald Sim, 2024-07-30 This book examines the influence of key films on public understanding of big data and the algorithmic systems that structure our digitally mediated lives. From star powered blockbusters to civic minded documentaries positioned to facilitate weighty debates about artificial intelligence, these texts frame our discourse and mediate our relationship to technology. Above all, they impact society's abilities to regulate AI and navigate big tech's political and economic maneuvers to achieve market dominance and regulatory capture. Foregrounding data politics with close readings of key films like Moneyball Minority Report The Social Dilemma and Coded Bias, Gerald Sim reveals compelling ways in which films and tech industry adjacent media define apprehension of AI. With the mid 2010s techlash in danger of fizzling out, Screening Big Data explores the relationship between this resistance and cultural infrastructure while highlighting the urgent need to refocus attention onto how technocentric media occupy the public imagination. This book will interest students and scholars of film and media studies, digital culture, critical data studies, and technopolitics.

Cyber Zen Gregory Price Grieve, 2016-12-08 Cyber Zen ethnographically explores Buddhist practices in the online virtual world of Second Life. Does typing at a keyboard and moving avatars around the screen, however, count as real Buddhism? If authentic practices must mimic the actual world, then Second Life Buddhism does not. In fact, a critical investigation reveals that online Buddhist practices have at best only a family resemblance to canonical Asian traditions and owe much of their methods to the late twentieth century field of cybernetics. If, however, they are judged existentially by how they enable users to respond to the suffering generated by living in a highly mediated consumer society, then Second Life Buddhism consists of authentic spiritual practices. Cyber Zen explores how Second Life Buddhist enthusiasts form communities, identities, locations, and practices that are both products of and authentic responses to contemporary Network Consumer Society. Gregory Price Grieve illustrates that to some extent, all religion has always been virtual and gives a glimpse of possible future alternative forms of religion.

Kim Toffoletti surveys the ideas of this influential often provocative French thinker as they relate to today's image saturated environment. She demonstrates their relevance to analysing contemporary visual phenomena such as advertising, photography, reality TV, fashion, art, pornography, and virtual reality. Baudrillard's key themes and arguments are illustrated through a range of visual works from the graffiti art of Banksy and Katherine Hamnett's protest t-shirts to Sophie Calle's photography.

Color Monitors Martin Kevorkian, 2018-07-05 *Color Monitors* looks at a particular subset of imagined computer use focusing on scenarios that demand from the person at the keyboard an intimate technical knowledge. My research has uncovered a peculiar pattern: race comes into sharp relief when computer use is depicted as difficult labor requiring special expertise. Time and again in such scenarios the helpful person of color is there to take the call to provide technical support to deal with the machines. In interpreting such images *Color Monitors* analyzes the computer fearing strain in American whiteness, an aspect of white identity that defines itself against information technology and the racial other imagined to love it and excel at it. Martin Kevorkian. Following up on Ralph Ellison's intimation that blacks serve as the machines inside the machine, *Color Monitors* examines the designation of black bodies as natural machines for the information age. Martin Kevorkian shows how African Americans are consistently depicted as highly skilled, intelligent, and technologically savvy as they work to solve complex computer problems in popular movies, corporate advertising, and contemporary fiction. But is this progress? Or do such seemingly positive depictions have more disturbing implications? Kevorkian provocatively asserts that whites' historical fear of a black planet has in the age of microprocessing converged with a new fear of computers and the possibility that digital imperatives will engulf human creativity. Analyzing escapist fantasies from *Mission Impossible* to *Minority Report*, Kevorkian argues that the placement of a black man in front of a computer screen doubly reassures audiences: he is nonthreatening, safely occupied, even imprisoned by the very machine he attempts to control, an occupation that simultaneously frees the action heroes from any electronic headaches. The study concludes with some alternatives to this scheme, looking to a network of recent authors with shared affinities for Ellison and Pynchon, willing to think inside the black box of technology. Connecting race, technology, and American empire, *Color Monitors* will attract attention from scholars working in emerging areas of race theory, African American studies, film studies, cultural studies, and technology and communication studies.

Atari Age Michael Z. Newman, 2018-10-30 The cultural contradictions of early video games a medium for family fun but mainly for middle class boys an improvement over pinball and television but possibly harmful Beginning with the release of the Magnavox Odyssey and Pong in 1972 video games whether played in arcades and taverns or in family rec rooms became part of popular culture like television In fact video games were sometimes seen as an improvement on television because they spurred participation rather than passivity These space age pinball machines gave coin operated games a high tech and more respectable profile In Atari Age Michael Newman charts the emergence of video games in America from ball and

paddle games to hits like Space Invaders and Pac Man describing their relationship to other amusements and technologies and showing how they came to be identified with the middle class youth and masculinity Newman shows that the new media of video games were understood in varied even contradictory ways They were family fun but mainly for boys better than television but possibly harmful and educational but a waste of computer time Drawing on a range of sources including the games and their packaging coverage in the popular trade and fan press social science research of the time advertising and store catalogs and representations in movies and television Newman describes the series of cultural contradictions through which the identity of the emerging medium worked itself out Would video games embody middle class respectability or suffer from the arcade's unsavory reputation Would they foster family togetherness or allow boys to escape from domesticity Would they make the new home computer a tool for education or just a glorified toy Then as now many worried about the impact of video games on players while others celebrated video games for familiarizing kids with technology essential for the information age
