gradual shift in the way forensic scientists approach the evaluation of DNA profiling evidence that is taken to court Many laboratories are now adopting probabilistic genotyping to interpret complex DNA mixtures However current practice is very diverse where a whole range of technologies are used to interpret DNA profiles and the software approaches advocated are commonly used throughout the world Forensic Practitioner s Guide to the Interpretation of Complex DNA Profiles places the main concepts of DNA profiling into context and fills a niche that is unoccupied in current literature The book begins with an introduction to basic forensic genetics covering a brief historical description of the development and harmonization of STR markers and national DNA databases The laws of statistics are described along with the likelihood ratio based on Hardy Weinberg equilibrium and alternative models considering sub structuring and relatedness The historical development of low template mixture analysis theory and practice is also described so the reader has a full understanding of rationale and progression Evaluation of evidence and statement writing is described in detail along with common pitfalls and their avoidance The authors have been at the forefront of the revolution having made substantial contributions to theory and practice over the past two decades All methods described are open source and freely available supported by sets of test data and links to web sites with further information This book is written primarily for the biologist with little or no statistical training However sufficient information will also be provided for the experienced statistician Consequently the book appeals to a diverse audience Covers short tandem repeat STR analysis including database searching and massive parallel sequencing both STRs and SNPs Encourages dissemination and understanding of probabilistic genotyping by including practical examples of varying complexity Written by authors intimately involved with software development training at international workshops and reporting cases worldwide using the methods described in this book

Epidemic Disease in Mexico City, 1761-1813 Donald B. Cooper,2015-01-20 Five deadly epidemics chiefly typhus and smallpox struck Mexico City in the years between 1761 and 1813 claiming a minimum of fifty thousand lives Mexico City was at that time the major metropolis of the New World and the capital of New Spain by far the richest and most sophisticated city in that vast empire It had the best medicines the best doctors and the best hospitals of the New World What caused these devastating epidemics Donald B Cooper here makes a thorough study of the problem Based almost entirely on unpublished manuscript materials from the national archives of Mexico and the municipal archives of Mexico City his work represents the first detailed study of the impact of epidemic disease on the history of New Spain primarily of its capital The course of each epidemic its inclusive dates the mortality it caused and its effect upon the community are fully described At the time a major epidemic was in progress the author says all levels of government national and local secular and ecclesiastical became involved in varying degrees in providing resources and leadership The Church wealthy corporations and private citizens contributed the main funds During the actual time of crisis an outbreak could be prosecuted with remarkable success and cooperation Once an epidemic was over however little was done to prevent another No single person or agency in Mexico City was sufficiently cognizant of the diverse problems involved to cope with them within a national or regional range not even the viceroy Such vital public works as aqueducts waterlines roads and canals were inadequately maintained Such essential municipal services as cleaning streets and canals collecting garbage and refuse and caring for the muddy shallow cemeteries were poor if not nonexistent Government officials as well as the populace were insufficiently concerned with the relation between sanitation and disease The practice of medicine in eighteenth century Mexico had few scientific or professional aspects The close relation of medicine and theology tended to inhibit experimentation that might have effectively broadened the frontiers of medical knowledge Traditionalism acted as a barrier to the adoption of innovations In the epidemic of 1779 for instance inoculation which could have saved innumerable lives was totally rejected in the outbreak of 1797 it was accepted only by the small upper class when vaccination came to Mexico in 1803 it met the same militant opposition The wonder then is not that so many died of disease but that so many lived
