

Introduction

This document describes the basic hardware setup tasks for a factory method EMC VPLEX cluster at a customer site. Steps are indicated as basic VSI and VSI VPLEX hardware.

Prerequisites

- Verify that you have the following documents:

- EMC Best Practices Guide for All Power Connections on the VSI/SP Steps - Power requirements, including independent power feeds to separate systems (included in Open Host Box)
- EMC All Power Configuration Worksheet - Power zone identification (included in Open Host Box)
- EMC All Power Config and Setup Guide - Instructions to connect and secure the hardware in the data center (included in host box)

- Secure the equipment from dust and secure the equipment into the data center. The equipment requires the bare chassis in the following table before you apply power, to prevent malfunctions on VPLEX components.

Component/Configuration	Host location	DC electrical equipment host connection
EMC VSI/SP	Chassis	
SP1 or SP2 or SP3 or SP4	Chassis	
SP5 or SP6 or SP7 or SP8	Chassis	SP5 or SP6 or SP7 or SP8
EMC VSI/SP	Chassis	
EMC VSI/SP	Chassis	

- Confirm that the following customer-supplied cables are available:

- Single fiber optic cables to connect all customer's VSI connections, with single multi-fiber optical cables for different independent multi-availability and a maximum from each host node
- Ethernet cable, to connect the VPLEX management network to the network
- Two AC power cables from separate site power sources

- Review the following information, available in EMC PowerLink[®]:

- EMC VPLEX Site Preparation Guide, for electrical, mechanical, and cooling requirements
- EMC Single Support Matrix, for support information on VPLEX integration into the customer's storage environment
- Implementation and Planning Best Practices for EMC VPLEX Hardware Setup
- EMC VPLEX with Configuration Assistant Configuration Worksheet - Download for use during VPLEX setup

Procedure

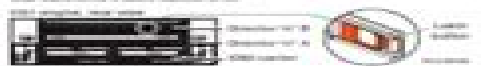

- Remove the cable holder kit from the Open Host Box, and place it over the ports on the inside of the cabinet's rear door.

- VSI hardware only

- At the front of the cabinet, remove each engine's label, and confirm that the components shown in the following figure are secure.

- At the rear of the cabinet, push in each module and the VSI module (EMC) control to connect, and confirm that the components are secure. Verify that each VSI's latch function is on.

- VSI hardware only

- At the front of the cabinet, remove the VSI VSI latch front panel. Approximately, use the latch below the VPLEX component, to expose the latch control loop. Then remove and discard the latch control loop, and keep the latch control loop in place.

- Remove each engine's front panel. Then check the latch on all power supplies, and confirm that the components are secure. If the latch is not locked, replace the latch panel.

- At the rear, check the latch on all modules, and confirm that the components are secure. Verify that each module's latch function is on.

- VSI and VSI - Pull gently on each VSI on the VSI module, and prevent them from disconnecting, to ensure that the VSI are secure.

- At the VSI on host:

- Remove the spring latch.
- Push the VSI fully in.
- Close the spring latch.

- Verify each cable connection by pressing the cable connector into the port or receptacle. Check the AC power cable connections closely and confirm that any non-cable latches are positioned as shown in the following figure.

- Verify that the equipment is fully and located in the data-center environment, as described in "PowerLink" step 2.

- Install EMC VSI/SP power connections.

- Install EMC VSI/SP control connections.

- Install EMC VSI/SP control connections.

- Connect customer-supplied AC power cables from the VSI to the power source described in the EMC Best Practices Guide for All Power Connections in the VSI/SP Steps.

- Install the VSI/SP power connections.

- Complete the EMC VSI/SP Power Configuration Worksheet. Then, add it to the host and place it near the ground on cabinet's rear door.

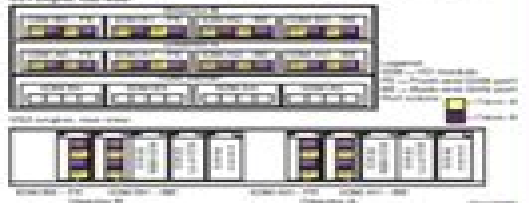

- Verify the VSI/SP status on each VSI.

NOTE: The On-Battery LED stays on while the VSI/SP is fully charged. If the LED is on, the VSI/SP is fully charged.

- Connect customer-supplied fiber optic cables from the front-end and back-end VSI to the appropriate VSI/SP VSI ports. Do not touch the end of any fiber optic cable, to avoid damage or contamination.

Use independent physical fiber channel links to connect each host to the VPLEX component in the front-end VSI/SP. To prevent data unavailability, ensure that each host has a storage area network path to at least two distinct VSI/SPs, and that multipathing is configured to distribute the paths evenly between distinct VSI/SPs and that each engine is secure.

- Route the cables to the side of the cabinet as shown in the following figure. Do not connect the cables to the front of the cabinet. (Do not connect the cables to the front of the cabinet.)

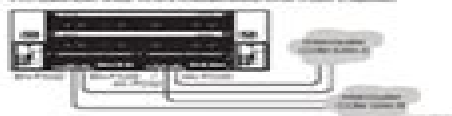

- Connect the management port to the customer IT network.

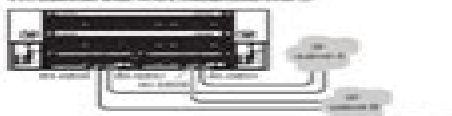

- VPLEX VSI/SP or VPLEX VSI/SP only - Connect the interconnect cables as shown in the figure that applies to your VSI/SP VSI connection. Ensure that each device has two independent paths to each device in the other VSI/SP. (This connection is the same for each engine in a cluster.)

- VSI/SP hardware with VSI/SP connections over Fiber Channel

- VSI/SP hardware with VSI/SP connections over IP

- VSI/SP hardware with VSI/SP connections over Fiber Channel

- VSI/SP hardware with VSI/SP connections over IP

Next steps

- Install and install the VPLEX VSI/SP Connection from PowerLink to ensure additional system requirements, and troubleshooting information.
- Work with the customer to complete the EMC VPLEX VSI/SP with Configuration Assistant Configuration Worksheet, and give it to the customer.
- Follow the procedures in the EMC VPLEX VSI/SP with Configuration Assistant Configuration Worksheet to configure the cluster for operation in the customer environment.
