Innovative Research in Life Sciences E. Andrew Balas, 2018-11-08 I thoroughly enjoyed reading this book as it has taken me on a journey through time across the globe and through multiple disciplines. Indeed, we need to be thinking about these concepts and applying them every day to do our jobs better. Farah Magrabi, Macquarie University, Australia. The reader will find intriguing not only the title but also the content of the book. I am also pleased that public health and even more specifically epidemiology has an important place in this ambitious discussion. Elena Andresen, Oregon Health Science University, USA. This book is very well written and addresses an important topic. It presents many reasons why basic scientists/researchers should establish collaborations and access information outside traditional means and not limit thinking but rather expand such and perhaps develop more innovative and translational research ventures that will advance science and not move it laterally. Gerald Pepe, Eastern Virginia Medical School, USA. This book gathers logically and presents interestingly with many examples the qualities and attitudes a researcher must possess in order to become successful. On the long run, the deep and carefully reexamined research will be the one that lasts. Zoltan N. Bolyai, University, Romania. I really liked the five pillars delineating the components of humanism in research. This book has made a major contribution to the research ethics literature. David Fleming, University of Missouri, USA. A comprehensive review of the research phase of life sciences from design to discovery with suggestions to improve innovation. This vital resource explores the creative processes leading to biomedical innovation, identifies the obstacles and best practices of innovative laboratories, and supports the production of effective science. *Innovative Research in Life Sciences* draws on lessons from 400 award-winning scientists and research from leading universities. The book explores the innovative process in life sciences and puts the focus on how great ideas are born and become landmark scientific discoveries. The text provides a unique resource for developing professional competencies and applied skills of life sciences researchers. The book examines what happens before the scientific paper is submitted for publication or the innovation becomes legally protected. This phase is the most neglected but most exciting in the process of scientific creativity and innovation. The author identifies twelve competencies of innovative biomedical researchers that described and analyzed. This important resource highlights the research phase from design to discovery that precedes innovation disclosure. Offers a step-by-step explanation of how to improve innovation. Offers solutions for improving research and innovation productivity in the life sciences. Contains a variety of statistical databases and a vast number of stories about individual discoveries. Includes a process of published studies and national statistics of biomedical research and reviews the performance of research labs and academic institutions. Written for academics and researchers in biomedicine, pharmaceutical science, life sciences, drug discovery, pharmacology. *Innovative Research in Life Sciences* offers a guide to the creative processes leading to biomedical innovation and identifies the best practices of innovative scientists and laboratories.

The Metabolism of Islands

Simron Singh, Marina Fischer-Kowalski, Marian Chertow, 2021 This book makes the case for why we should care about islands and their sustainability Islands are hotspots of biocultural diversity and home to 600 million people that depend on one sixth of the earth s total area including the surrounding oceans for their subsistence Today they are at the frontlines of climate change and face an existential crisis Islands are however potential hubs of innovation that are uniquely positioned to be leaders in sustainability and climate action This volume argues that a full fledged program on island industrial ecology is urgently needed with the aim of offering policy relevant insights and strategies to sustain small islands in an era of global environmental change The nine contributions in this volume cover a wide range of applications of socio metabolic research from flow accounts to stock analysis and their relationship to services in space and time They offer insights into how reconfiguring patterns of resource use will allow island governments to build resilience and adapt to the challenges of climate change

Bartos, 2021-03-23 This is the first book to address the social organisation of modern yoga practice as a primary focus of investigation and to undertake a comparative analysis to explore why certain styles of yoga have successfully transcended geographical boundaries and endured over time whilst others have dwindled and failed Using fresh empirical data of the different ways in which posture practice was disseminated transnationally by Krishnamacharya Sivananda and their leading disciples the book provides an original perspective The author draws upon extensive archival research and numerous fieldwork interviews in India and the UK to consider how the field of yoga we experience today was shaped by historic decisions about how it was transmitted The book examines the specific ways in which a small group of yogis organised their practices and practitioners to popularise their styles of yoga to mainstream audiences outside of India It suggests that one of the most overlooked contributions has been that of Sivananda Saraswati 1887 1963 for whom this study finds his early example acted as a cornerstone for the growth of posture practice Outlining how yoga practice is organised today on the world stage how leading brands fit into the wider field of modern yoga practice and how historical developments led to a mainstream globalised practice this book will be of interest to researchers in the field of Yoga Studies Religious Studies Hindu Studies South Asian History Sociology and Organisational Studies

We all want to be unique special good and extraordinary But most of us today are not exceptional Most of us have not yet discovered and fully developed our talents and we are not contributing to society We instinctively want to fit in be normal and belong Our urge to be accepted and loved compels us to conform by adopting the attitudes of others We think and behave how our friends and family expect us to Often the attitudes and beliefs promoted by our friends and family do not facilitate individual growth They suffocate our personal development and influence decisions that often result in dissatisfaction sadness frustration anger stress and even depression and illness We become so burdened with health security and relationship issues that we have no time energy or resources to develop our talents and achieve our full potential as human beings We are caught as individuals and as a society in crises created and compounded by our strong allegiance to friends and family
