**Introducing Teachers and Administrators to the NGSS** Eric Brunsell, Deb M. Kneser, Kevin J. Niemi, 2014-05-01 If you're charged with helping educators achieve the vision of the new science standards this is the professional development resource you need. This book is chock full of activities and useful advice for guiding teachers and administrators as they put the standards into practice in the classroom. Written by three experts in professional development for science teachers. **Introducing Teachers and Administrators to the NGSS** Introduces the vocabulary structure and conceptual shifts of the NGSS. Explores the three dimensions of the Framework: science and engineering practices, crosscutting concepts, and disciplinary core ideas, and how they're integrated in the NGSS. Provides classroom case studies of instructional approaches for students challenged by traditional science teaching. Covers curricular decisions involving course mapping, designing essential questions, and performance assessments, and using the NGSS to plan units of instruction. Examines the connections between the NGSS and the Common Core State Standards. Offers advice for getting past common professional development sticking points and finding further resources. Given the widespread changes in today's education landscape, teachers and administrators may feel overwhelmed by the prospect of putting the new standards into practice. If you're a science specialist, curriculum coordinator, or instructional coach who provides professional development, you will find this collection immensely helpful for heading off initiative fatigue, whether in an individual school or throughout a district. **Language in Writing**

**Instruction** María Estela Brisk, 2020-09-22 Accessible and engaging, this book offers a comfortable entry point to integrating language instruction in writing units in grades 3-8. A full understanding of language development is necessary for teaching writing in a successful and meaningful way. Applying a Systemic Functional Linguistics (SFL) approach, María Brisk embraces an educator's perspective, breaks down the challenges of teaching language for non-linguists, and demonstrates how teachers can help students express their ideas and create cohesive texts. With a focus on the needs of all students, including bilingual and English language learners, Brisk addresses topics necessary for successful language instruction and moves beyond vocabulary and grammar to address meaning-making and genre. This book provides a wealth of tools and examples for practice and includes helpful instructional resources that teachers can return to time after time. Moving from theory to practice, this teacher-friendly text is a vital resource for courses in language education programs, in-service teacher training seminars, and for pre-service and practicing English Language Arts (ELA) teachers who want to expand their teaching abilities and knowledge bases. This book features a sample unit and a reference list of instructional resources. **12 YEAR-WISE CTET Paper 2 (Social Science/ Studies) Solved Papers (2011 - 2019) - 2nd English Edition** Disha Experts, 2019-09-06

Gordin, W. Lim, 2014-05-19 This book offers an insight

into the research and practices of science teaching and learning in the Singapore classroom with particular attention paid to how they map on to science as inquiry. It provides a spectrum of Singapore's science educational practices through all levels of its education system detailing both successes and shortcomings. The book features a collection of research and discourse by science educators in Singapore organized around four themes that are essential components of approaching science as inquiry: teachers' ideas and their practices, opportunities and constraints from a systemic level, students' competencies and readiness to learn through inquiry, and the need for greater awareness of the role of informal learning avenues in science education. In addition, the discourse within each theme is enriched by commentary from a leading international academic which helps to consolidate ideas as well as position the issues within a wider theoretical and international context. Overall, the papers set out important contexts for readers to understand the current state of science education in Singapore. They also highlight strengths and gaps in practices of science as inquiry as well as provide suggestions about how the system can be improved. These research findings are therefore helpful as they provide honest and evidence-based feedback as well as tangible and doable ideas that policy makers, teachers, students, and school administrators can adopt, adapt, and enhance.

**What Are They Thinking?** Page Keeley, 2014-04-01. Children are continually developing ideas and explanations about their natural world. Some of these ideas are consistent with the science children are taught; others differ significantly from scientific explanations. Many of these ideas will follow students into adulthood if they remain hidden from the teacher and unresolved. The challenge for teachers is to find ways to elicit these ideas and then use appropriate strategies to move students learning forward. Page Keeley, author of the bestselling NSTA Press series *Uncovering Student Ideas in Science*. You don't have to become a mind reader to understand the ideas young students bring to science class. This collection will help you draw out and then recognize what students know or think they know about the natural world. *What Are They Thinking?* is a compendium of 30 Formative Assessment Probes, columns from NSTA's elementary journal *Science and Children*. Each chapter provides a sample formative assessment probe, a set of interesting questions that root out commonly held, often mistaken ideas. Geared to elementary students, probe topics range from why you can see the Moon in the daytime to where water goes when it evaporates to what is or isn't a rock. Your students' answers to each probe will help you take a step back and figure out how to guide them from where they are conceptually to where they need to be. Accompanying teacher notes, easy to grasp explanations, and advice that tell you how to encourage evidence-based discussion and then monitor students' understanding. A bonus feature: a set of study group questions written especially for this compendium by award-winning author Page Keeley. So forget about acquiring psychic powers. Instead, turn to *What Are They Thinking?* to transform both your teaching and your students' learning about science.

**Breaking Point** Rebecca Schwartz Greene, 2023-01-03 WINNER SOCIETY FOR MILITARY HISTORY DISTINGUISHED BOOK AWARDS FIRST BOOK This book informs the public for the first time about the impact of American psychiatry on soldiers during World War II Breaking Point is the first in depth history of American psychiatry in World War II Drawn from unpublished primary documents oral histories and the author's personal interviews and correspondence over years with key psychiatric and military policymakers it begins with Franklin Roosevelt's endorsement of a universal Selective Service psychiatric examination followed by Army and Navy pre and post induction examinations Ultimately 2.5 million men and women were rejected or discharged from military service on neuropsychiatric grounds Never before or since has the United States engaged in such a program In designing Selective Service Medical Circular No. 1 psychiatrist Harry Stack Sullivan assumed psychiatrists could predict who might break down or falter in military service or even in civilian life thereafter While many American and European psychiatrists questioned this belief and huge numbers of American psychiatric casualties soon raised questions about screening's validity psychiatric and military leaders persisted in 1942 and 1943 in endorsing ever tougher screening and little else Soon families complained of fathers and teens being drafted instead of being identified as psychiatric 4Fs and Blacks and Native Americans among others complained of bias A frustrated General George S. Patton famously slapped two malingering neuropsychiatric patients in Sicily a sentiment shared by Marshall and Eisenhower though they favored a tamer style Yet psychiatric rejections, evacuations and discharges mounted While psychiatrist Roy Grinker and a few others treated soldiers close to the front in Tunisia in early 1943 this was the exception But as demand for manpower soared and psychiatrists finally went to the field and saw that combat itself not predisposition precipitated breakdown leading military psychiatrists switched their emphasis from screening to prevention and treatment But this switch was too little too late and slowed by a year long series of Inspector General investigations even while numbers of psychiatric casualties soared Ironically despite and even partly because of psychiatrists' wartime performance plus the emotional toll of war postwar America soon witnessed a dramatic growth in numbers popularity and influence of the profession culminating in the National Mental Health Act 1946 But

veterans with PTSD not recognized until 1980 were largely neglected
